1 Shipped Product and Version

Open-Xchange AppSuite backend 7.4.2-rev41

Open-Xchange AppSuite frontend 7.4.2-rev29

2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2293.

33748 CSV-Import fails - java.lang.StringIndexOutOfBoundsException: null

Depending on the detected encoding, the CSV import tried to skip the byte order mark in the underlying stream. Due to a programming error, the offset of the skipped bytes was not subtracted from the number of bytes to read, which lead to an uncaught runtime exception.

Solution: Don't attempt to read more bytes from the buffer than available.

35632 POP3 must not be selectable if POP3 bundle is not running

Selectionbox does only contain imap if pop3 support is disabled. The box is also shown as disabled (makes no sense to edit a selectionbox with only one item in it). Existing pop3 accounts are still displayed correctly as pop3, to keep the settings consistent.

This has been fixed by removing pop3 option from selection box.

3 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

33748, 35632,
