2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2655.

40060 Folder synchronisation issues with iOS
A new status response has been introduced with earlier releases, which take care of consistently synchronising root folders in case they were modified. This improvement added a new response code which got handled in a unexpected way by certain iOS devices. As a result, synchronisation of folder content (e.g. mails) could get delayed. This situation has been addressed by selectively using the old response code for normal folder updates and the new response code for root folder changes.

3 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs
