OX Guard
Release Notes for Patch Release #2777

September 30, 2015

Security Patch Release

This Patch Release addresses critical vulnerabilities; please consider deploying it as soon as possible. Not deploying this Patch Release may result in remote service exploitation, security threats to users and exposure of sensitive data.

Detailed vulnerability descriptions will be publicly disclosed no earlier than five (5) working days after public availability of this Patch Release. There is no indication that one or more of these vulnerabilities are already getting exploited or that information about them is publicly circulating.

1   Shipped Product and Version

Open-Xchange Guard 2.0.0-rev11

Find more information about product versions and releases at `http://oxpedia.org/wiki/index. php?title=AppSuite:Versioning_and_Numbering`

2   Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2756.

41303   Data truncation: Data too long for column 'email' at row 1
Database column email length of 50 was too short for some mailboxes.
Solution: Uniformity in email varchar size across tables to Varchar(250).

41156   Initial mail with password did not get sent out after saving the mail as draft
After saving an email as draft and editing the email before sending only this email was sent to the non-Guard User. The email including the password wasn't sent.
Fix saving draft email with new Guest account creating new account without sending password.

41149   Some public keys can not get imported to Guard
Keys with a comma "," in the name was failing because the JAVA InternetAddress parser was considering this a comma separated list of addresses, as the PGP Keys don't have quotes around the name.
Handle proper parsing of Email address with "," included.

40847   OX Guard user guide cannot be launched from appsuite
No link for OX Guard user guide is displayed inside Appsuite Help.
This has been fixes by adding help links to compose and security settings.

41466   CVE-2015-7385
CVSSv2: 5.7

3   Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.
   To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.
   All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4   Fixed Bugs

41303, 41156, 41149, 40847, 41466,
