2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2980.

43223 High load caused by calendar query

For birthday series no limit would be set for the action "Getting all appointments as recurrences" if a new session has been used.

Set default value to "now + 3 years" at creation of a new session to prevent high load.

43226 Auto save draft fails on some HTML Mails

mapObject was missing and caused the error when saving HTML mails.

This has been fixed by adding underscore mixin.

43382 Favorite imap folders disappear in case a new subfolder gets created

Initial value of favorites was used after restarting the open-xchange service.

This has been fixed by using the current list of favorites after restarting the server.

43387 Mails w/o external content can show the load-external-images button

Wrong return value in CSS sanitizing routine caused a displayed image button without any function.

Solution: Fixed check if CSS content has actually been modified.

3 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

43223, 43226, 43382, 43387,
