## 2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3071.

### **44128 Sorting E-Mail returns no results**

On certain IMAP backends sorting E-Mail by "From" or "Subject" led to empty result lists. This has been solved by falling back to in-application sort in case a IMAP backend is unable to return sorted results.

### **44076 Adding huge distribution lists leads to high system load**

Adding distribution lists that contain many list members to a E-Mail was very inefficient and led to high system load at the client. This has been solved by optimizing the related implementation to execute the operation in a reasonable time frame.

### **44024 Adding out-of-office messages led to errors**

When adding a out-of-office message for the very first time, it was not saved correctly and had to be re-entered. This has been solved by limiting the amount of information in accordance to enabled features.

### **44021 Distribution-list members missing when adding malformed addresses en bloc**

When adding several distribution-list members to a distribution-list at once and using white-space within mail addresses, trailing addresses were missing when selecting the distribution-list later on. This has been solved by sanitizing input data for white-spaces.

### **43836 Distribution-list members with single-character addresses get lost**

When using mail addresses with a single-character personal part in distribution-lists, those addresses are not added as recipients when selecting the distribution-list. This behaviour was specific to a certain mail compose feature and has been resolved by fixing a less-or-equal condition.

## 3 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## 4 Fixed Bugs

44128, 44076, 44024, 44021, 43836,
