2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4078.

52756   Twitter can not be configured anymore
Case-sensitive look-up for an OAuth API: ″Twitter″ is not equal to ″twitter″;Case-sensitive look-up for an OAuth API: ″Twitter″ is not equal to ″twitter″.
Perform ignore-case look-up by OAuth API identifier to solve this issue.

52751   Creating external accounts does not work anymore
Wrong detection if a mail account action was targeted for primary mail account.
Reliably check specified account identifier to determine primary account to solve this problem.

52675   Html mail not displayed at all
Some mails were not displayed because <style> tag does not get closed while sanitizing mail′s HTML content.
This has been fixed by orderly closing the <style> tag while sanitizing HTML content.

52606   Show hidden files setting does not work at all
Hidden files were not displayed because filter extensions for files were never called.
Invoked filter extension point to post process file list to solve this issue.

52534   Disableschema: SessiondService is used but not registered in the activator
Required SessionD service was not orderly tracked.
This has been solved by properly tracking needed SessionD service.

52530   Pop3 access to external account is not logged by AuditLog
The tracked instance of AuditLogService was not orderly put into utilized service registry.
This has been fixed by properly putting tracked service into service registry.

52402   Drag and Drop not working with chrome on windows 10 Touch
It was recognized as a touch device and DND was disabled.
This has been solved by adding an additional check.

52391   Empty Page in UI settings section after update
Js error in yell function and only a empty settings page were displayed.
Made yell function more robust, so Settings do not break anymore.

52348   Logging issue after appsuite update
Open-xchange-osgi didn´t conatin the latest logback extension.
Defined explicit dependency to newest open-xchange-osgi containing the latest logback extension.

52101   'Folder "9" is not visible to user "X" in context "YY"
Caused by the changes for favorite folders, where favorite folders for every module were added to the collection pool. The favorite folder for drive has the parent with id "9". When the ui is refreshed, all parents of all folders are listed. That causes every refresh to request the folder with id "9". This has been fixed by only adding favorite folders for modules with granted permission.

51757   When the first mail filter rule is created for a user, it does not show in the mail filter list
The filter collection does not handle an initial add correctly.
Now the filter collection handles an initial add correctly.

50798   Renaming a root level folder which contains a Favorite Folder will lead to "Mailfolder not found on IMAP Server"
Caused by missing checks if parent folders get renamed or removed.
This has been solved by looking for rename or removal of parent folders.

50478   Impossible to add two or more different Gmail accounts
Initial assumption to re-use OAuth credentials was wrong.
Now OAuth credentials are not re-use when adding mail accounts.

3   Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.
To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

4   Fixed Bugs

52756, 52751, 52675, 52606, 52534, 52530, 52402, 52391, 52348, 52101, 51757, 50798, 50478,
