Release Notes for Patch Release #4602

2018-03-12

1 Shipped Product and Version

Open-Xchange AppSuite backend 7.8.4-rev24
Open-Xchange AppSuite frontend 7.8.4-rev23

Find more information about product versions and releases at `http://oxpedia.org/wiki/index.php?title=AppSuite:Versioning_and_Numbering` and `http://documentation.open-xchange.com/`.

2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4583.

57276   Error while saving Guard message to Draft
Invoking cleanup() on a ContentAwareComposedMailMessage instance throws an Unsupported-OperationException.
This has been solved by avoiding invoking clean-up for ContentAwareComposedMailMessage instance.

57168   Mail shows only blank body
Depth was not incremented, when style tag in html-body was added.
Increment depth when adding CSS on style tag to solve this issue.

57067   Emoticon pop-up is not anchored properly in Compose window
Strict javascript engines (Edge) failed when assigning values to read-only variables in strict mode.
This has been fixed by using the setter function with a new object instead of assigning directly to the object of the getter.

57066   Graphical Elements in Email Appear Squashed When Printed
Combination of width:auto and max-widht:100% causes elements to enlarger when set to 100% width.
This has been solved by removing styles.

57064   Calendar module, monthly view, first week of January is missing
Using tables in monthview led to missing days in the view.
Implemented a more cleaner version to have always all days displayed.

56999   Incorrect handling of sieve_max_redirects
The MAXREDIRECTS limit that the Sieve server provided was used on the middleware to check the total redirect commands in the entire user's script.
The middleware now checks the total redirect commands in a single rule to solve this issue.

56912   OX6: added \n after logout to signature
New/Missing line breaks after sanitizing.
Don't use the new print for signatures for OX6 to avoid unnecessary line breaks.

56589   Shared private calendar - decline appointment as a secretary (not an invitee) - deletes the appointment for everyone
A missing "participants" array in the updated appointment data was misinterpreted so that participants got removed.
Take over original participant data in case they're not explicitly set by the client.

55298   Maximum configured sized needs to be fixed for Japanese Error message
Response format was strangely encoded html.
This has been solved by forcing response format to be correct html with json data.

55057   Folder structure order for the default folders are changed
Wrong order were implemented.
This has been fixed by changing fixed order of folders.

54765   Guest quota not working as expected
Guest quota was not working as expected.
This has been solved by removing frontend quota check.

52107   Different display of name with comma
Parentheses were rigorously dropped from address strings.
Solution: Keep parentheses in quoted personal part; e.g. ''`"Doe, Jane (JD)" <doe.jane@domain.de>`''.

3   Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.
To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

4   Fixed Bugs

57276, 57168, 57067, 57066, 57064, 56999, 56912, 56589, 55298, 55057, 54765, 52107,
