1. About this Release

This is the initial Release of OXtender for SyncML v.6.20.0.0-7.

The Open-Xchange OXtender for SyncML extends the power of Smart Collaboration™ to users of hundreds of types of mobile devices offered by major device manufacturers. SyncML enabled devices can update user personal contact information wirelessly.

Without any additional software, the OXtender ensures seamless connection and interface between Open-Xchange and common mobile phones. SyncML is the platform-independent information synchronization standard that drives data mobility by establishing a common language for communications between devices, applications and networks.

The OXtender for SyncML is a server-side plugin based on the Open-Xchange USM synchronization framework. Synchronizing contacts from the personal contact folder is supported.

Features and benefits of OXtender for SyncML:

- Cost effective solution
- Based on open SyncML standard
- Supported by hundreds of devices, not only Smartphones
- All SyncML, most Symbian devices
- User personal contact data always synchronized with Open-Xchange and manageable anywhere via mobile phone
- Mail with device client
- Poll, not Push
- Over-The-Air (OTA) auto-configuration of mobile devices

2. Availability

Any Open-Xchange user of the on-premise or hosted version can use the OXtender for SyncML without additional charges. The offering is part of the Open-Xchange Server Edition or Open-Xchange Hosting Edition.

3. Shipped Packages and Version

3.1. Open-Xchange OXtender for SyncML

File name: open-xchange-syncml_6.20.0.0-7_all

When reporting bugs, please include the version number in your bug report.

https://bugs.open-xchange.com/enter_bug.cgi?product=OXtender%20%20for%20SyncML

Product: OXtender 2 for SyncML

4. Requirements, Installation and Configuration

4.1. Open-Xchange Server

Open-Xchange Server 6.18.2 or later is required to operate this extension.

Please Note: To get in favor of the latest minor features and bug fixes, you need to have a valid license. The article how that can be done:

<http://oxpedia.org/wiki/index.php?title=UpdatingOXPackages>

4.2. Installation

Please have a look on the Installation and Configuration Guides for the Open-Xchange Server and different devices under:

http://oxpedia.org/wiki/index.php?title=OXtender_for_SyncML

4.3. Supported data fields

According to the SyncML specification, the device sends a list of supported fields and the server responds with corresponding data. Note that not all fields might be supported on every device.
