## 1 Shipped Product and Version

Open-Xchange AppSuite backend 7.4.2-rev29

Open-Xchange AppSuite frontend 7.4.2-rev22

Open-Xchange EAS 7.4.2-rev7

Open-Xchange Office 7.4.2-rev10

## 2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2048.

### **31533 External IMAP-accounts reverse sorted**

UI sort the folder to move the standard folders to top position (INBOX first). The sorting function had a flaw for external accounts.

This was adjusted with this fix.

### **31889 When saving a distribution list vCard directly into an Address book , the distribution list name isn't automatically saved**

If a name for the list is available in the VCF it is now used for the name field in the form.

### **31992 Change first name will not updated in portal page**

There was a circular dependency.

This has been fixed and the Portal user widget now triggers the correct events.

### **32017 Sub folder arrow mark shown without subfolders**

Subfolder information gets overridden in Outlook-style folder tree.

This has been fixed by keeping subfolder information intact.

### **32075 Rename a folder from Samsung S3 Mini EAS is not synchronized**

USM was setting an empty tree parameter to the folder update request because the new persistent fields engine delivers empty string for non existing fields instead of null as before.

This has been fixed by setting the tree parameter only if the field is really set ( length >0).

### **32091 Mails per week-day graph, names of days are always shortcuts of German names independently of chosen language**

118n issue has been fixed.

### **32267 OXMF subscribe source not translated**

While translated strings are available, the displayname for subscription sources did not get translated due to a missing call to the translation service.

This has been fixed by translating subscription display name when serializing subscription sources.

### **32608 Contact picture will not displayed after upload in detail view**

Removed redrawContact and optimized for edge-case, redrawContacts caused too many redraws.

### **32609 User status not updated for repetitive appointments**

Change event handling for recurring appointments in detail view.

### **32692 Unwanted attachment part\_1.xml displayed (for migrated messages in Chat folder)**

Alternative XML part was not ignored.

This has been fixed by ignoring alternative XML part.

**32816 Paragraphs in mail compose too big**

Add new config option for smaller paragraphs: `io.ox/core//features/mailComposeSmallParagraphs=true/false` (default: false), now can also be set to 0 or 1 for smaller/bigger difference.

**32860 Increased database load (most likely) after update to 7.4.2 Rev20**

Some clients write the same values for user attributes again and again. This resulted in writing the same values again and again in the database causing useless write load.

Solution: Detect in the user caching layer unchanged values for user attributes and do not touch the storage layer at all.

**33286 Capital letters overlapped in addressbook**

Fixed the calculation of the label height.

**33290 Switching email folders is not working on 10" displays using 1024x600 resolution**

Fixed issue in folderview for small devices.

**33474 Priority toggle is not intuitive**

High prio is now one red exclamation mark, low prio is a blue minus. Changed in list view and mail compose.

### 3 Tests

Not all issues that got resolved with this Patch Release could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported issue when deploying to a staging or production environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

### 4 Fixed Bugs

31533, 31889, 31992, 32017, 32075, 32091, 32267, 32608, 32609, 32692, 32816, 32860, 33286, 33290, 33474,
