2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2916.

41640 Blue Screen on the Login page

It might happen that the `/saml/init` call run into a timeout. Although the sign plugin does not resolve or reject the deferred object the login page will be displayed. As most of the SAML implementation includes its own login mechanism this might not be wanted behaviour.

This has been fixed by introducing two new options which can be configured in the `as-config.yml`: `samlLoginErrorRedirectURL: {string}` and `samlLoginPage: true || false (default)`

42141 Faulty "context menu" behaviour in eMail "full-view"

Drag and drop was enabled for the detailview.

This has been fixed by removing Drag and drop for the standalone detailview.

42443 Wrong RPM versioning for open-xchange-appsuite-saml packages

Original developer implemented RPM packaging was wrong.

This has been fixed by correcting RPM `.spec` file for `open-xchange-appsuite-saml`.

42682 `java.lang.StringIndexOutOfBoundsException: String index out of range: 0`

Failed to return email list due to a corrupt "From" address in one or more emails.

Solution: Properly handle possible runtime errors during puny-code to ASCII address conversion. Use the address as-is instead.

42742 Distributionlists can not be added to "TO"-field

Distribution lists where not resolved.

This has been fixed by adding function to handle resolution.

42880 "Image transformation denied. Resolution is too high."

Message missing after update from 7.6.2-rev37 to 7.6.2-rev41 for "Image transformation denied. Resolution is too high.". Changing the behavior to respond with a 406 HTTP error code in case image transformation has been denied to make USM/EAS happy, accidentally removed the logging.

Solution: Re-introduce proper logging for possible exceptions of type `ImageTransformationDeniedIOException`.

3 Tests

Not all defects that got resolved could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

41640, 42141, 42443, 42682, 42742, 42880,
