

Release Notes for Patch Release #3187

March 29, 2016

Security Patch Release

This Patch Release addresses critical vulnerabilities; please consider deploying it as soon as possible. Not deploying this Patch Release may result in remote service exploitation, security threats to users and exposure of sensitive data.

Detailed vulnerability descriptions will be publicly disclosed no earlier than five (5) working days after public availability of this Patch Release. There is no indication that one or more of these vulnerabilities are already getting exploited or that information about them is publicly circulating.

2 Vulnerabilities fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3147. Solutions for vulnerabilities have been provided for the existing code-base via Patch Releases.

44584 CVE-2016-3173

CVSSv3: 4.2

44585 CVE-2016-3173

CVSSv3: 4.2

44586 CVE-2016-3173

CVSSv3: 4.2

44598 CVE-2016-3173

CVSSv3: 5.4

44622 CVE-2016-3173

CVSSv3: 3.7

3 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3147.

42364 Mailfilter: possible to save without condition/action

It was possible to save an empty Mailfilterrule.

This has been fixed by adding a missing check. Now the user is not able to create a Mailfilterrule without conditions.

43327 Drafts not displayed correctly after auto-save

Drafts folder was not instantly reloaded and every draft mail gets a new ID, therefore they are not displayed correctly immediately.

This has been fixed by reloading drafts folder on auto-save and save-as-draft.

44240 Series appointment in the future not visible in calendar anymore after about ~2years 9 month

This was caused by a calculation limit for appointments. Series calculation limit (1000 occurrences) only strikes in after the requested time frame is reached.

The limit now respects the requested timeframe and the server calculates more than 1000 occurrences if needed to match that timeframe. Note, that if the timeframe contains more than 1000 occurrences, this bug is still valid.

44363 Sieve rules get deleted on disabling vacation rule

A single lined dot '.' character was parsed as a Sieve literal, if this dot was in a vacation rule, other Mailfilterrules were deleted on disabling the vacation rule.

This has been fixed by not parsing single lined dot '.' character as Sieve literal when found inside of double quotes.

44422 Mailfilter rule without condition gives unspecific error

This issue is fixed by Bugfix #42364.

4 Tests

Not all defects that got resolved could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

42364, 43327, 44240, 44363, 44422,
