## 2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3236.

### **45089 Edit as new from encrypted mail not working**

The action link had been renamed and Guard was no longer disabling the Edit as new text. Now properly hidden until we have text integration.

### **45164 OX Guard not possible to save encrypted vCard in address book**

Fixed the Guard link to do the VCard import.

Note: There is still an error in the backend that reports a warning about email "Work" type not being supported, but the import works successfully.

### **45451 Welcome Email: temporary key on the wrong place**

The temporary password for a guest account in the e-mail template was displayed on the wrong place.

Adjusted the template to solve this issue.

### **45452 Dots at the end of a sentence are missing at various positions inside of Guard dialogues / tour**

The missing dots were added for german, other languages will be fixed later.

### **45474 "Send Secure" Translation Missing in Spanish**

Spanish translation were added to solve this issue, now "Enviar de forma segura" is displayed.

## 3 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## 4 Fixed Bugs

45089, 45164, 45451, 45452, 45474,
