2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3271.

42442 Drive: send as mail sometimes gives 400 - Bad request

A function was only checking .folder but not .folder_id.
Now also checking the folder_id to prevent this issue.

44855 Mail cannot be deleted when quota exceeded

Errorhandling was not adjusted with latest changes.
This has been solved by adjusting the error handling.

45607 SUBJECT of vacation message changed sometimes

The subject was erroneously quoted if it wasn't RFC822 compliant.
This has been fixed by encoding the subject only if it contains non ASCII characters.

45608 Vacation rule and status not correctly displayed in filter rules tab after first creation

The vacation notice is saved after leaving the settings pane. This leads to a wrong list of the available mailfilters if the update request of the vacation notice is pending.
Solution: The update request of the vacation notice now triggers a refresh for the mail filter list if it is successful.

45619 Search in mails on a mobile device adds the folder list for each click on the search icon

Incomplete check in case email folder is mandatory.
Adjusted this check to prevent the multi displayed folders.

45663 Real Name will not be used by default for Reply and Forward

After changing the Real Name for the sender address this was not used for Reply and Forward emails.
This has been fixed by setting the default for all possible ways to send an email.

45675 Disable / enable the next and previous button in the mobile button bar

Guided Tour was hanging on mobile if some apps were disabled.
Now the navigation buttons in the tour are adjusted to avoid this problem.

45860 New -r parameter for deleteuser cannot be accessed via SOAP

Deleteuser missed the reassign parameter.
This has been solved by adding optional reassign parameter to user soap interface.

3 Tests

Not all defects that got resolved could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production

environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

42442, 44855, 45607, 45608, 45619, 45663, 45675, 45860,
