

Release Notes for Patch Release #3400

July 4, 2016

Security Patch Release

This Patch Release addresses critical vulnerabilities; please consider deploying it as soon as possible. Not deploying this Patch Release may result in remote service exploitation, security threats to users and exposure of sensitive data.

Detailed vulnerability descriptions will be publicly disclosed no earlier than five (5) working days after public availability of this Patch Release. There is no indication that one or more of these vulnerabilities are already getting exploited or that information about them is publicly circulating.

2 Vulnerabilities fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3347. Solutions for vulnerabilities have been provided for the existing code-base via Patch Releases.

46630 CVE-2016-5741

CVSS: 3.7

46688 CVE-2016-5740

CVSS: 4.3

3 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3347.

44877 Not possible to access mails in folder with \in name

Backslashes were used to escape dots, and the corresponding decode removed all backslashes. This has been fixed by only removing backslashes before dots.

45113 "Please define at least one action"-Message not translated

New translation was added.

46265 Vacation Rule in App Suite UI does not show duration if only Start or End Date is set, Sieve Rule will be changed accordingly

Only if start and end date was available the timeframe was set.

With this fix the timeframe can be activated even if only start or end date is available.

46289 Onboarding wizard - translations are missing

Added new translations for the onboarding wizard.

46305 Listpushusers always reports permanent=false

Trackers were open before last service was registered.

This has been solved by opening trackers after all services were registered.

46346 Sntp account information not shown

Username and password were not shown for smtp settings.

Now username and password is displayed always.

46482 Outlook Oxtender: Mail in Inbox unreadable after 2nd Reply

Outlook stores more properties and made emails unreadable by deleting the old one and creating the new one with additional not supported information.

This has been fixed by creating only one header Content-Transfer-Encoding.

46514 Mail not displayed in Appsuite-UI

Custom single tag `time` was not interpreted correctly.

This has been fixed by adding single tag `time` to interpret custom html-tags correctly and display content.

46563 Field position ignored when updating a filter rule

Position field was not used during an update.

This has been fixed by properly using position field during update.

46589 Inserting a mailfilter with position 0 and an empty list fails with BAD_POSITION Exception

It was not possible to create a filter rule with position 0.

Solution: Consider the rule position when adding a new rule.

46623 Automatic sign out - you end up sometimes on a white page

Missing explicit page reload when the location path did not change.

This has been fixed by enforcing page reload when using redirect and the pathname doesn't change.

46654 List of contacts not displayed in address

Contacts are sorted based on a string constructed by different properties of a contact. In case of an unnamed distribution list, there's the possibility that this string is null.

Solution: Fall back to an empty sort name in case of unnamed distribution lists.

4 Changes relevant for Administrators

4.1 Changes of Configuration Files

Change #3406 The '%sanitisedMessage' token has been introduced to the logback.xml in order to address the 'CVE-117: Improper Output Neutralization for Logs' vulnerability

`<!--` The `'%sanitisedMessage'` token has been introduced in order to address the `'CVE-117: Improper Output Neutralization for Logs'` vulnerability.

This token ensures that the `'LogSanitisingConverter'` is used in the logging pipeline in order to sanitise log messages that might contain ESC sequences, something that could lead to log injection/tampering/forging. `-->`

```
<pattern>%date{"yyyy-MM-dd'T'HH:mm:ss,SSSZ"} %-5level [%thread]
%class.%method\(%class{0}.java:%line\) %n%sanitisedMessage%n%lmdc%exception{full}</pattern>
```

Change #3414 Changed comment about emclient capabilities within client-onboarding-scenarios.yml

Changed comment to: `# emclient -> Requires "emclient_basic" or "emclient_premium" capability`

5 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

6 Fixed Bugs

44877, 45113, 46265, 46289, 46305, 46346, 46482, 46514, 46563, 46589, 46623, 46654, 46630, 46688,
