2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3399.

41656 Mail lost on forward

Mail were lost on forwarding after the mail was auto saved to draft before.

Solution: Explicitly check the composition space if the message which is about to be deleted is referenced as reply/forward.

46574 Error after sending vCard

Sending vCard uses a list request that gets lots of null values that are not expected in the contacts model. An error was displayed if the user try to edit the vcard after sending it.

This has been fixed by droppping certain null values after list request (birthday and distribution_list), also fixed "scrollIntoView" run-time error.

46743 Mail-Body did not get displayed

CSS content were not properly parsed/detected if surrounded by HTML comments and Mail-Body was not displayed.

Solution: Orderly parse/detect CSS content surrounded by HTML comments.

46864 No mail content shown: Multipart mail could not be parsed

Some Multipart mails could not be parsed if a source attribute in a Image-Tag contains another tag. Changed parsing for image-tags to display those mails.

3 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

41656, 46574, 46743, 46864,
