2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4284.

54808 CacheAware does not work for Drive folders

When programmatically working with Drive folders, they could be declared to be "CacheAware" but this property did not change the folders behavior in terms of cache handling. This has been resolved and needs to be validated at the specific implementation.

54790 Getting quota does not work anymore

When requesting quota information for non-existing file storage accounts a runtime exception was thrown instead of properly handling the case. This has now been corrected.

54702 Rename folder pop-up not closing

The dialog to rename a folder in App Suite would not close under very special conditions. This has been researched and a potential workaround got applied. The effectiveness of this solutions needs to be validated for the environment in question.

54701 Unable to copy raw image content to mail compose with IE11

When copying raw image content from apps like MS Paint to mail compose, rather than just adding that image via drag&drop or the provided composer options, its content did not get pasted when using IE11. This has been corrected for this particular case, however note that copy&paste is implemented very inconsistently across browsers and operating systems, other cases will potentially not work as expected since the browser does not provide necessary information to web applications.

54586 Inconsistency for saving drafts when using attachments from Drive

When adding attachments to a Mail from OX Drive, they were added when saving a mail as draft but not removed when removing the attachment. This behavior has been corrected in a way that mail attachments are never stored when saving as draft.

54453 Account help page missing

A particular help page for external accounts was missing, this has been corrected.

54437 Contact collector not working

Collecting contact information while reading mail was not working when combining specific mail handling (seen/unseen) in combination with contact collection. This has been solved.

51742 Usability improvement when handling appointment invitations

When receiving invitations or modifications of an appointment, we did show a very prominent pane that allows users to accept/decline. However some users still tried to manually import the attached ICS file which led to a series of problems. This is now being avoided by hiding ICS attachments in cases where we already show the accept/decline pane.

51194 Ability to disable adding attachments to PIM apps via configuration

A new frontend-side configuration option has been added to disable the "add attachment" area when creating or editing PIM objects. Note that this is purely cosmetic and does not affect other clients than OX App Suite. See Change #4301 for more information.

3 Changes relevant for Operators

3.1 Changes of Configuration Files

Change #4301 Feature toggle for PIM attachments

PIM attachments were designed to be always available, despite any configuration or capability. The capability 'filestore' was only introduced to decide where mail signatures (so called snippets) are to be stored: file store or database. A customer can now have a system without 'filestore' but still wants attachments. By switching on 'filestore' all mail signatures are "lost" as the according database storage is not considered anymore. To solve that dilemma we introduced a UI setting that allows to en-/disable the attachment sections. The setting is optional and falls back to the existence of the 'filestore' capability. In that way we break nothing but affected customers can re-activate the attachment sections without enabling the capability. Setting: `io.ox/core//features/PIMAttachments`.

4 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

54808, 54790, 54702, 54701, 54586, 54453, 54437, 51742, 51194,
