## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4328.

### **55380 Standalone Document Converter doesn't start anymore after last upgrad**

After upgrading a standalone document converter node, the open-xchange-documentconverter-server daemon doesn't start anymore.

This has been fixed by adding new bundles to launcher.

### **55265 Massive high load on configdb - DB ReadSlave**

Excessive querying of all context identifiers, likely caused by unnecessarily "per node" initialization of default attachment storage cleaner.

Solution: Efficient retrieval of distinct context identifiers per schema and refactored default attachment storage cleaner to be managed as cluster task (runs only once, no more per node).

### **55254 Rename / delete folders in ox drive not possible**

Creation of trash and public folders on demand was removed.

This has been solved by reenabling the creation of trash and public folder on demand.

### **55240 Sharing link can not selected on a mobile device**

Copy button was disabled for safari because of api limitations.

This has been solved by enabling the button for safari again, safari supports needed api meanwhile.

### **55229 Japanese text is garbled in AppSuite**

Some Japanese characters are not display correctly (garbled) in emails.

This has been fixed by using "x-windows-iso2022jp" charset in case Java's "iso-2022-jp" charset yields unmapped characters.

### **55200 Capabilities checks performed against "mailfilter" instead of "mailfilter\_v2" even though the mailfilter.v2 API is the one being used**

Capability check was set to mailfilter instead of mailfilter\_v2.

This has been solved by setting capability check to mailfilter\_v2.

### **55175 Mail Module does not render thumbnails for .txt**

This has been solved by adding txt to regex of supported file extensions for preview.

### **54956 Post install script not uses com.openexchange.mail.filter.preferGSSAPI=true**

When updating from 7.8.3 consider the case where users preferred GSSAPI as SASL mech and set the new c.o.mail.filter.preferredSaslMech accordingly to solve this issue.

### **54468 Status of a multi-file incorrect**

If a file uplaod was running and a second file wupload is started, the uplaod time were not calculated new.

Fixed time estimation as increased collection size was not taken into account during calculation.

**51093 External DriveAccount on mobile: button „Switch to parent folder“ leads to Hidden-Root**

The root folder is "9" for Drive, but for external storages "1". When the root is reached, the overview is shown. It was only checked by 9 if the root is reached.

This has been fixed by checking also for folder\_id 1 for external storages.

### 3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

### 4 Fixed Bugs

55380, 55265, 55254, 55240, 55229, 55200, 55175, 54956, 54468, 51093,
