2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4353.

55455 Contacts export and have EOL

LF character was used as line terminator in exported CSV files. Outlook was not able to handle those files.

This has been solved by using CRLF sequence as line terminator in exported CSV files.

55425 Unclear behaviour on versioning when uploading files upper/lower case

File name check was case-sensitive.

Now file names check ignoring case to have a standardized procedure.

55175 Mail Module does not render thumbnails for .txt

This has been solved by adding txt to regex of supported file extensions for preview.

54750 TO: with IDN scrambled after reply

The mail sent by thunderbird does not contain the ASCII representation of the mail address. Instead it contains the unexpected IDN representation.

This was fixed in javax.mail as it deals with unexpected mail content. Try to parse with the default java charset. If ASCII is provided (as expected) nothing will change.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

55455, 55425, 55175, 54750,
