2 Bugs fixed with this Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 1.7.0. Some of the announced bug fixes may have already been fixed at the existing code-base via Patch Releases.

PLG-280 UI: AllowBlacklist does not update list on add/delete with multiple tabs

Status: Done

Root Cause Description:

model is not updated on returned data from application & missing hooks to refresh event

Solution Description:

let model update on returned data & sync view, add handling of refresh event View will update with fresh data returned by add/modify/delete operations. View will load fresh data based on autorefresh or explicit refresh (note that it cannot keep the selected tab.. will always return to first tab) View will load fresh data when returning to settings (and blacklist is displayed) from a different app. Same as for item above it will not keep selected tab This should address all cases above. At most one refresh is required to have data in sync between multiple tabs/browsers.

4 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.
