PLG-350 Blaskwhitelist duplicate check breaks after adding "@"

Status: Done

Root Cause Description:

The duplicate check (and other validation) in the allow-blocklist plugin supports adding both single addresses and (via the context menu) multiple addresses at once. Some parts use the `{{_.intersection()}}` function, which treats its parameters as array, even when called on two strings. This results in checking for duplicates of individual characters, which in the case of "@" is always true.

Solution Description:

* Convert single string input case to array * Small code refactoring to remove unecesseray tests

Resolution: Verified
 Severity: 3
 Components: blackwhitelist (ui)
 Verified with Builds: plugins-ui-1.7.2-rev4
 Labels: L3
 Affected Packages: open-xchange-appsuite-blackwhitelist

4 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.
