2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4887.

CP-85 Creatoreport of large single brand stops after around 10%

Preparation of the initial list takes too long.

This has been solved by optimizing initial report list creation

CP-88 Make mailadmin validation static to id not be 2 and less

Nginx servlet causes high load on configdb due to mailadmin check.

This has been solved by removing db access and assume that userid 2 or less is not allowed on the nginx servlet.

CP-92 Creating and deleting aliases is not possible

Impossible to change aliases because of immutableSet.

Work with a mutable set instead to solve this issue.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

CP-85, CP-88, CP-92,
