2   Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6105.

CP-345   deleteDomainCatchall does not remove domain from context
Fixed an issue where the mail domain was not released from the context when a catchall account for that domain has been deleted.

CP-349   changeuser will always add oxAntivirus: TRUE in LDAP
The value of the oxAntivirus and oxSpamLevel attributes were set in the LDAP Attributes object without looking into the default values, with the null value for oxAntivirus interpreted as the value from the configuration.

oxAntivirus and oxSpamLevel attributes are never modified in the createUser and changeUser operations.
Instead, new operations have been introduced in CloudManagementService for that specific purpose, and the UserAdminWebService uses those instead.
They allow for removing the attribute values in LDAP and the UserAdminWebService has been modified to do so when the value that is specified in the inbound REST API call matches the configured default value.

3   Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.
        To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4   Fixed Bugs
