1 General Information

1.1 Warnings

Warning

It is mandatory to restart the **open-xchange** service on all middleware nodes after performing the update.

Warning

Custom configuration or template files are potentially not updated automatically. After the update, please always check for files with a **.dpkg-new** or **.rpmnew** suffix and merge the changes manually. Configuration file changes are listed in their own respective section below but don't include changes to template files. For details about all the configuration files and templates shipped as part of this delivery, please read the relevant section of each package.

Warning

Since Cloud Plugins 1.6.0, the Cassandra functionality has been moved to OX Middleware. This requires manual changes of configuration files because the following settings needs to be changed accordingly:

/opt/open-xchange/etc/cloudplugins-cassandra.properties:

```
com.openexchange.cloudplugins.cassandraHost (1)
com.openexchange.cloudplugins.cassandraPort (2)
```

to */opt/open-xchange/etc/cassandra.properties:*

```
com.openexchange.nosql.cassandra.clusterContactPoints (1)
com.openexchange.nosql.cassandra.port (2)
```

Please see [OX Cassandra documentation](#) for a full set of options.

Warning

Since Cloud Plugins 1.6.4, we removed the packaging epoch mechanism which will prevent an automatic update of open-xchange-oxaas packages from 1.6.3. If your environment contain 1.6.3 open-xchange-oxaas packages, please enforce the update to 1.6.4 or later manually.

1.2 Delivery Comment

This delivery was requested with following comment:

Cloud-plugins 1.6.12 Feature Delivery for Core 7.8.4

1.3 Install Package Repository

This delivery is part of a restricted software repository:

<https://software.open-xchange.com/components/cloud-plugins/stable/1.6.12/DebianJessie>
<https://software.open-xchange.com/components/cloud-plugins/stable/1.6.12/RHEL6>
<https://software.open-xchange.com/components/cloud-plugins/stable/1.6.12/RHEL7>

1.4 Build Dependencies

This delivery was build and tested with following dependencies:

frontend-master-7.8.4,plugins-master-1.3

1.5 Notice

Info

Some configurations can be changed without restarting the service, please call following command for getting a list of supported settings.

```
/opt/open-xchange/sbin/listreloadables
```

Please use following command to enable capable and changed configurations on a running system.

```
/opt/open-xchange/sbin/reloadconfiguration
```

2 Shipped Version

2.1 Package open-xchange-cloudplugins

The Open-Xchange cloud plugin bundles

Version: 1.6.12-1

Type: OX Middleware Plugin

Depends on:

```
open-xchange-admin-reseller (>=7.8.4)
open-xchange-admin-soap-reseller (>=7.8.4)
open-xchange-cassandra (>=7.8.4)
open-xchange-rest (>=7.8.4)
```

Conflicts with:

```
open-xchange-authentication
open-xchange-authentication-database
open-xchange-authentication-imap
open-xchange-authentication-ldap
```

2.1.1 General Functionality

The package open-xchange-cloudplugins contains a set of bundles to manage an integrated platform consisting of OX App Suite components and dovecot. It uses some additional software components in order to do that.

- openldap to store information for mail routing used by dovecot and postfix and to act as authentication source
- postfix as mail server
- nginx to act as a proxy for http, imap, pop3 and smtp
- cassandra to store data that often changes like last login attempts, etc.

The package itself contains some OSGi bundles explained in the following sections and the file `cloudplugins.properties` contain configurations shared among each other.

2.1.2 Admin Plugins

Those plugins extend the OX provisioning capabilities. They maintain the data required into the openldap server to do mail routing and authentication using the [2.1.8 LDAP Management](#) functionality. Whenever a context or user is created, deleted or changed, the corresponding data in the ldap server is also updated.

```
com.openexchange.admin.cloudplugins
com.openexchange.admin.cloudplugins.console
```

2.1.2.1 SOAP API

Also in these bundles, there's another SOAP API providing cloud-plugins specific methods. Please see for further details the [OXaaS SOAP API Documentation](#).

2.1.2.2 Admin REST API

Starting with release 1.6.3, there's now also a REST API, check <https://documentation.open-xchange.com> for a link.

Info

Note that in order for this API to be accessible, you need to add an entry like ProxyPass /oxaas balancer://oxcluster/oxaas to your proxy_http.conf.

2.1.3 Authentication Plugin

This plugin authenticates against the ldap server. To determine the user it needs to know the brand the user is belonging to. This is done using a configurable HTTP host header. This host header is added by the nginx proxy which sits in front of the ox middleware. Please see corresponding file cloudplugins-authentication.properties for configuration details.

```
com.openexchange.authentication.cloudplugins
```

2.1.4 Masterauth Servlet

This servlet allows to create an ox http session on behalf of a configurable master login and password without knowing the individual users login and password.

```
com.openexchange.cloudplugins.api.masterauth
```

This servlet provides the following API call which returns a valid OX session.

```
GET /api/oxaas/masterauth/brand/<brand>/context/<contextid>/user/<userid>
```

The following entry must be added to the apache proxy configuration:

```
ProxyPass /api/oxaas balancer://oxcluster/api/oxaas
```

The request has to provide a X-AUTHENTICATION header containing the value of

```
Base64( HMAC-SHA1( brand-auth-Key, UTF-8-Encoding-Of( StringToSign ) ) );

StringToSign = brand " " +
contextid + " " +
userid;
```

brand-auth-key is the value of the ldap nginxAuthKey Attribute of the brand entry. In addition to that, the requestor has to implement HTTP Basic auth using a configured master login and password. How to generate the X-AUTHENTICATION header with perl:

```
perl -MMIME::Base64 -MDigest::HMAC_SHA1=hmac_sha1
-e 'print encode_base64(hmac_sha1("example.com 24 3","secret"))." ;"'
```

How to test with wget:

```
wget -dv --user=admin --password=secret
--header='X-AUTHENTICATION: 6cmrSTcWCcyOV7mzkSgHDbk8RI='
http://example.com/api/oxaas/masterauth/brand/example.com/context/24/user/3 -O -
```

The cloudplugins-master-auth-servlet.property configuration file belongs to this servlet.

2.1.5 Cassandra

This bundle utilizes the cassandra bundle from the ox middleware to read and write data from/to a cassandra cluster.

```
com.openexchange.cloudplugins.cassandra
```

As of now, the following data structures have to be created in order to use this bundle.

```

1  $ cqlsh
2
3  create keyspace ox WITH REPLICATION = { 'class' : 'SimpleStrategy', 'replication_factor' :
4      1 };
5  use ox;
6  CREATE TYPE login_info ( login_time timestamp, ip_address text);
7  CREATE TABLE logins (ox_id text PRIMARY KEY, brand text, logins map<text, frozen<
8      login_info>> );
9  CREATE TABLE failure_logins (ox_id text PRIMARY KEY, brand text, login_errors map<text,
      int>);
10 CREATE TABLE alias_log ( alias text PRIMARY KEY, brand text, creation_date timestamp,
      deletion_date timestamp, ox_id text );
11 CREATE TABLE quota_usage ( ox_id text, type text, usage bigint, count bigint, primary key
      ((ox_id), type));

```

The complete bundle can be turned off and some functionality must be configured per brand. See corresponding configuration file `cloudplugins-cassandra.properties`.

2.1.6 Dovecot

This is an interface to the `doveadm` REST API of dovecot. Right now it only implements querying the mail quota usage of users.

```
com.openexchange.cloudplugins.dovecot
```

The `doveadm-config.properties` configuration file belongs to this interface.

2.1.7 Mailmapping

The mail mapping is required to integrate with OX Guard. It resolves an email address into a context and userid.

```
com.openexchange.cloudplugins.mailmapping
```

2.1.8 LDAP Management

This provides methods to maintain data in the LDAP server.

```
com.openexchange.cloudplugins.management
```

2.1.8.1 LDAP structure

The ldap schema used with these bundles can be found in the `ldap` folder within this git repository. The ldap tree consists of three main branches:

- 1. The brand tree contains the brand accounts with all users belonging to each brand below.
- 2. The configuration tree containing configuration entries like mailstores, mailservers, etc.
- 3. The context tree containing all contexts of all brands in the entire system.

A brand is the same as a subadmin in the ox reseller bundle. This reseller bundle is a requirement to run the cloud-plugins environment. Due to the fact that all users within a brand are in the tree below a brand, user logins must not be unique within contexts as it is usually in an open-xchange environment, they must be unique within each brand. For details about the reseller bundle please see the [Reseller Bundle Documentation](#).

2.1.9 Nginx Servlet

This provides a servlet used by Nginx to authenticate external IMAP, POP and SMTP users against the ox cloud-plugins scheme.

```
com.openexchange.cloudplugins.nginx.auth.servlet
```

Where users directly using OX webmail are authenticated using the [2.1.3 Authentication Plugin](#), external IMAP, POP and SMTP logins must also be mapped from the internal `uid@contextid` representation to a login string the corresponding brand prefers. This might be an email address, a phone number, or whatever else. Nginx acts as a IMAP, POP and SMTP proxy in front of dovecot and uses the nginx auth servlet as an authentication and transformation source to provide dovecot with the internal login id after it successfully authenticated the user. See corresponding configuration file `nginx-auth-servlet.properties`.

2.1.10 Cloud Report

This is a central tool to get service usage informations on user level. Therefore the administrator has different options to generate this report, which are explained later. The report procession is designed to be highly efficient in regard of memory and cpu usage. If not configured otherwise, the used resources should never interfere with the processes of the operating system. While in procession, parts of the report are stored on hdd, merged into the resulting report and deleted, when the report is done. The report is processing each relevant schema in its own thread and all schemas in parallel for maximum speed. See corresponding configuration file `cloudplugins_report.properties`.

```
com.openexchange.cloudplugins.report
```

2.1.10.1 Requirements

The report loads data from OX-DB as well as cassandra and LDAP storage. If no cassandra or OX-DB connection can be established, the report will not start. Without a valid LDAP connection, errors will be logged inside the report.

2.1.10.2 Report Types

Currently, there are two report types.

- Metrics - The original cloud-plugins report which provides user usage information in JSON.
- TKG112 - Provides user alias information in CSV.

These report types are described further below.

2.1.10.3 Usage

In general, there can be only one report processed at a time. A second report will be denied and the ID of the current report will be displayed. This report can be aborted with the corresponding option and all stored data will be deleted. During procession, the current status can be requested and the user will be provided with all finished contexts compared to totals.

Warning

The processed contexts will only be updated when the schema is completely processed to evade potential bottlenecks because of Object locks.

```

1 Usage: createreport
2 -h,--help           Prints a help text
3 --environment       Show info about commandline environment
4 --nonl             Remove all newlines (\n) from output
5 --responsetimeout <responsetimeout> response timeout in seconds for reading
                        response from the backend (default 0s; infinite)
6 -A,--adminuser <adminuser>      * master admin user name
7 -P,--adminpass <adminpass>      * master admin password
8 -s,--timeframe-start <timeframe-start> Set the starting date of the desired
                        timeframe in which the user logins are considered, format: dd.mm.yyyy.
```

```

9  -e,--timeframe-end <timeframe-end>      Set the ending date of the desired
      timeframe in which the user logins are considered, in format: dd.mm.yyyy.
10 -a,--ignore-admin                        Ignore admins and dont show users of
      that category in the report.
11 -d,--show-drive-metrics                  Add drive metrics for every user.
12 -m,--show-mail-metrics                  Add mail metrics for every user.
13 -b,--single-brand <single-brand>        Create a report for the selected brand
      only. Identified by the brand admins sid.
14 -t,--terminate-report                    Terminates the currently processed
      report uuid.
15 -p,--pending-reports                    Get the status of the pending report.

```

Entries marked with an asterisk (*) are mandatory.
 Entries marked with an question mark (?) are mandatory depending on your
 configuration.
 Entries marked with a pipe (|) are mandatory for one another which means that
 at least one of them must be set.

```

1  Usage: createtkg112report
2  -h,--help                                Prints a help text
3      --environment                        Show info about commandline environment
4      --nonl                               Remove all newlines (\n) from output
5      --responsetimeout <responsetimeout> response timeout in seconds for reading
      response from the backend (default 0s; infinite)
6  -A,--adminuser <adminuser>              * master admin user name
7  -P,--adminpass <adminpass>              * master admin password
8  -b,--single-brand <single-brand>        * Brand to create report for. Identified
      by the brand admins sid.
9  -t,--terminate-report                    Terminates the currently processed
      report uuid.
10 -p,--pending-reports                    Get the status of the pending report.

```

Entries marked with an asterisk (*) are mandatory.
 Entries marked with an question mark (?) are mandatory depending on your
 configuration.
 Entries marked with a pipe (|) are mandatory for one another which means that
 at least one of them must be set.

2.1.10.4 Data Format and Storage

The Metrics Report data is stored in JSON format and looks like the example below.

```

1  {
2    "uuid": "28b3573af6734877a448ab614698d115",
3    "reportType": "OXaaS-report",
4    "timestamps": {
5      "start": 1498477236283,
6      "stop": 1498477276490
7    },
8    "version": {
9      "buildDate": "01.01.2017",
10     "version": "7.8.3"
11   },
12   "configs": {
13     "options": {
14       "show-drive-metrics": false,
15       "timeframe-start": 1466941236283,
16       "show-mail-metrics": false,
17       "single-brand": 0,
18       "ignore-admin": true,
19       "timeframe-end": 1498477236283
20     }
21   },

```

```

22  "errors":{
23      "Exception-ID":"ERROR-ID Categories=ERROR Message='Message' exceptionID=Exception-ID
24  },
25  "oxaas":{

43                      },
44                      "file-count-all-versions" : 7,
45                      "quota" : 104857600,
46                      "used-quota" : 2511077,
47                      "file-size-min" : 5,
48                      "file-count-latest-version" : 7,
49                      "file-size-avg" : 358725,
50                      "file-size-max" : 1255526
51                  },
52                  "mail" : {
53                      "mail-quota" : 2048,
54                      "mail-quota-usage" : 0
55                  },
56                  "imap-login":"3@1",
57                  "login-info":"adam@brandname",
58                  "email":"adam@brandname",
59                  "user-logins":{
60                      "HTTP" : 1497364334092,
61                      "open-xchange-appsuite" : 1497364334090
62                  },
63                  "unified-quota-enabled":true,
64                  "unified-quota-limit":104859648,
65                  "unified-quota":2511533
66              }
67          }
68      }
69  }
70 }

```

The TKG112 Report data is stored in CSV format and looks like the example below. It will output an additional file with _info appended that contains configuration information as well as errors.

```

1  Email_nameID, Email_Displayname, Email_Begin, Email_Address, Email_Create, Email_Remove,
   Email_isactive
2  ID1, TestUser1, 2016-12-06 14:11:00 +0000, testuser@brand.com, 2016-12-06 14:11:00 +0000,
   , true
3  ID2, TestUser2, 2016-12-06 14:11:00 +0000, testuser2@brand.com, 2016-12-06 14:11:00 +0000,
   2016-12-06 14:11:00 +0000, false

```

2.1.10.5 TKG112 Data Description

All

- Email_nameID - Varchar (256) - OX "userName"
- Email_Displayname - Varchar (320) - Displayname used when sending emails
- Email_Begin - Date (YYYY-MM-DD hh:mm:ss TIME_ZONE) - Date of the registration in the OX system
- Email_Address - Varchar (256) - email address including the domain name
- Email_Create - Date (YYYY-MM-DD hh:mm:ss TIME_ZONE) - Date when the email address was created
- Email_Remove - Date (YYYY-MM-DD hh:mm:ss TIME_ZONE) - Date when the email address was removed (optional)
- Email_isactive - Boolean true/false - Flag if the email account is active or not. Will be always true when Email_Remove is empty.

2.1.10.6 Metrics Data Description

General

- uuid - The report identifier
- reportType - Type of this report, so far only "OXaaS-report" possible
- timestamps - The start and end time of the report in milliseconds
- version - The builddate and version of the processing server
- errors - Map of all errors occurred during procession. Key is the exception Id and value is further information like message, category and Error-Id

Configs

- show-drive-metrics - true or false
- timeframe-start - The used timeframe start, if not set by the user, one year in the past is used
- show-mail-metrics - true or false
- single-brand - The sid of the brand admin or 0 if not set
- ignore-admin - true or false
- timeframe-end - The used timeframe end, if not set, the starting time of the report is used

OXaaS

- capabilitySets - All capability sets determined by the report. Key is the hashed value of all capabilities in a list
- brandname - The brandname with all userdata for the brand

Per Brand

- totals - Drive and mail quota information for the whole brand, cumulated values of all users.
- contexts - All context informations for this brand

Per User

- capabilitySet - The hash value of the capability-set this user has
- drive - All drive data for this user (only present if drive option is true)
- mail - All mail data for this user (only present if mail option is true)
- imap-login - Imap login address
- login-info - Login info, gather from LDAP
- email - users email address

- user-logins - A list of all protocols, the user used to login with the latest timestamp as milliseconds
- unified-quota-enabled - true or false
- unified-quota-limit - This users unified quota limit (only present if unified quota is enabled for this user)
- unified-quota - This users unified quota (only present if unified quota is enabled for this user)

Drive Data

- mime-types - Map of all mimetypes and their amount
- file-count-all-versions - Number of all files and versions for this user
- quota - Quota limit
- used-quota - Used quota
- file-size-min - Smallest file size in this storage
- file-count-latest-version - Number of files, respecting only the latest version
- file-size-avg - Average filesize
- file-size-max - Maximum filesize

Quota Data Sources With unified quota enabled

- drive limit - From LDAP
- drive quota - From Cassandra
- mail limit - From LDAP
- mail quota - From Cassandra

Without Unified Quota

- drive limit - From filestore
- drive quota - From filestore
- mail limit - From LDAP
- mail quota - From Cassandra

2.1.11 Unified Quota

This implements the unified quota feature for cloud-plugins. It requires cassandra to be running and initialized with the `quota_usage` table, see [2.1.5 Cassandra](#) section. All file quota usage is updated into and read from cassandra.

```
com.openexchange.cloudplugins.unifiedquota
```

Please see for information about how to use this bundle the [Unifiedquota Documentaion](#)

2.1.12 Passwordchange

This implements the ox password change callback API in order to be able to change passwords in LDAP.

```
com.openexchange.passwordchange.cloudplugins
```

2.1.13 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-cloudplugins
```

2.1.14 Configuration

For details, please see appendix [A](#)

/opt/open-xchange/etc/plugin/mailstore-cloudplugins.properties (page [18](#))

/opt/open-xchange/etc/cloudplugins-authentication.properties (page [19](#))

/opt/open-xchange/etc/cloudplugins-master-auth-servlet.properties (page [19](#))

/opt/open-xchange/etc/cloudplugins-cassandra.properties (page [19](#))

/opt/open-xchange/etc/cloudplugins.properties (page [21](#))

/opt/open-xchange/etc/doveadm-config.properties (page [21](#))

/opt/open-xchange/etc/nginx-auth-servlet.properties (page [22](#))

/opt/open-xchange/etc/cloudquotaservice.properties (page [23](#))

/opt/open-xchange/etc/cloudquotaservice-cassandra.properties (page [24](#))

/opt/open-xchange/etc/cloudplugins_report.properties (page [24](#))

2.2 Package open-xchange-cloudplugins-blackwhitelist-ldap

Implementation of blacklist whitelist for cloudplugins within LDAP

Version: 1.6.12-1

Type: OX Middleware Plugin

Depends on:

```
open-xchange-cloudplugins (>=1.6.12)
open-xchange-core (>=7.8.4)
open-xchange-plugins-blackwhitelist (>=1.3.0)
```

2.2.1 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-cloudplugins-blackwhitelist-ldap
```

2.2.2 Configuration

For details, please see appendix [A](#)

/opt/open-xchange/etc/cloudplugins-blackwhitelist-ldap.properties (page [25](#))

2.3 Package open-xchange-cloudplugins-mailfilter

CloudPlugins MailFilter Utilities This package implements a mailfilter interceptor driver framework and provides some useful drivers.

Version: 1.6.12-1

Type: OX Middleware Plugin

Depends on:

```
open-xchange-cloudplugins (>=1.6.12)
open-xchange-core (>=7.8.4)
open-xchange-mailfilter (>=7.8.4)
```

2.3.1 General Functionality

This plugin provides a mailfilter interceptor driver framework and some useful drivers. List of features implemented by this plugin:

- Registers a MailFilterInterceptor
 - Automatically starts a Driver Manager which tracks MailFilterInterceptor Drivers
 - When a user creates/updates/deletes a filter rule, the driver manager will run each driver that is supported for that user in order of their rank.
- Provides MailFilterInterceptor Drivers - configured via their enabled property
 - RedirectStatusDriver - supports any user in any of the configured brands and tells CloudManagementCassandraService the autoforward status and how many redirects exist.
 - RedirectBlacklistDriver - supports Config Cascade. Blocks users from creating only auto-forward or all redirect mail filter rules that use a To Address that is blacklisted.

2.3.2 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-cloudplugins-mailfilter
```

2.3.3 Configuration

For details, please see appendix [A](#)

/opt/open-xchange/etc/mailfilter-interceptor-drivers.properties (page [26](#))

2.4 Package open-xchange-cloudplugins-master-auth

Provides a CloudPlugins CloudAuthenticationDriver for master authentication

Version: 1.6.12-1

Type: OX Middleware Plugin

Depends on:

```
open-xchange-cloudplugins (>=1.6.12)
open-xchange-core (>=7.8.4)
```

2.4.1 General Functionality

This package supplies a CloudAuthenticationDriver tracked by the open-xchange-cloudplugins package. The driver adds a master authentication mechanism that can be configured by brand. Required configuration:

- com.openexchange.authentication.cloudplugins.user.regex
- com.openexchange.authentication.cloudplugins.authentication.uid.mode.*
- com.openexchange.authentication.cloudplugins.brand.master.auth.<brand>.password

The first two properties are supplied by the open-xchange-cloudplugins package. The last property is new and configured per brand.

2.4.1.1 Example

```
1 com.openexchange.authentication.cloudplugins.brand.master.auth.mybrand.password=secret
```

Configures a master password of "secret" for the brand "mybrand". A brand can only have one suitable CloudAuthenticationDriver, so there must not be a custom driver enabled. This driver is registered higher than the DefaultCloudAuthenticationDriver so it will be used over the default if configured for the brand.

2.4.2 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-cloudplugins-master-auth
```

2.4.3 Configuration

For details, please see appendix [A](#)

/opt/open-xchange/etc/cloudplugins-masterauth.properties (page [26](#))

2.5 Package open-xchange-cloudplugins-saml

SAML backend for any default Identity Server This package contains an SAML backend for any Identity Server, that fully supports the SAML protocol.

Version: 1.6.12-1

Type: OX Middleware Plugin

Depends on:

```
open-xchange-cloudplugins (>=1.6.12)
open-xchange-saml-core (>=7.8.4)
```

2.5.1 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-cloudplugins-saml
```

2.5.2 Configuration

For details, please see appendix [A](#)

/opt/open-xchange/etc/cloudplugins-saml.properties (page [27](#))

2.6 Package open-xchange-oxaas-alias

OXaaS alias bundle This package implements OXaaS alias handling.

Version: 1.6.12-1

Type: OX Middleware Plugin

Depends on:

```
open-xchange-admin (>=7.8.4)
open-xchange-core (>=7.8.4)
```

2.6.1 General Functionality

The plugin is available to everyone on the installed system.

List of features implemented by this plugin:

- Alias are provided through internal and external APIs
- add and all requests are backed by a Tarent adapter
- del request is handled internally by using the internal provisioning interfaces

- max concurrent aliases are set by config-cascade aware setting `com.openexchange.oxaas.aliasquota` with default of 15.

2.6.2 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-oxaas-alias
```

2.6.3 Configuration

For details, please see appendix [A](#)
`/opt/open-xchange/etc/oxaas-alias.properties` (page [28](#))

2.7 Package open-xchange-oxaas-mail-notify-ws

OXaaS notification mail servlet bundle

Version: 1.6.12-1

Type: OX Middleware Plugin

Depends on:

```
open-xchange-cloudplugins (>=1.6.12)
open-xchange-core (>=7.8.4)
open-xchange-imap (>=7.8.4)
open-xchange-rest (>=7.8.4)
open-xchange-smtp (>=7.8.4)
```

2.7.1 General Functionality

The plugin is available to everyone that has correctly setup configuration.
List of features implemented by this plugin:

- Configuration for templates are done on a config-cascade base
- `com.openexchange.oxaas.mail.quota.notify.prefix` with default value `notify.oxaas.over.quota`
- `com.openexchange.oxaas.mail.welcomemail.notify.prefix` with default value `notify.oxaas.welcome.mail`
- `com.openexchange.oxaas.mail.removed.sent.spam.notify.prefix` with default value `notify.oxaas.disable.sent.spam`
- The above prefix is used for the templates where each template must have `${prefix}.${quotavalue}.[html|subject|text].tmpl` files present, in the case of the over quota mails. For the others, it is `${prefix}.[html|subject|text].tmpl`
- Default files are provided for 90% and 100% with the prefix `notify.oxaas.over.quota`.
- `com.openexchange.noreply.address` must be set via config-cascade, otherwise this feature won't work.
- `com.openexchange.oxaas.mail.(quota|welcomemail|removed.sent.spam).ignoreFooterImage` can be set via config-cascade to disable footerImage added as attachment to the mail, or by using `com.openexchange.oxaas.mail.ignoreFooterImage` that applies to all types

2.7.2 REST API

This package implements the OXaaS mail notification generation servlet which will return several mails via a REST API:

```
1 /api/oxaas/notification/mail/quota/{usercontext}/ (JSON body: {"quota_threshold":"..."})
2 /api/oxaas/notification/mail/welcomemail/{usercontext}/
3 /api/oxaas/notification/mail/disable_sent_spam_notification/{usercontext}/
```

2.7.3 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-oxaas-mail-notify-ws
```

2.7.4 Configuration

For details, please see appendix [A](#)

/opt/open-xchange/etc/oxaas-mail-notification-templates.properties (page [28](#))

/opt/open-xchange/etc/oxaas-drive-quota-notification.properties (page [28](#))

2.7.5 Templates

```
/opt/open-xchange/templates/notify.oxaas.over.quota.90.text.tmpl
/opt/open-xchange/templates/notify.oxaas.over.quota.90.html.tmpl
/opt/open-xchange/templates/notify.oxaas.over.quota.100.text.tmpl
/opt/open-xchange/templates/notify.oxaas.over.quota.100.subject.tmpl
/opt/open-xchange/templates/notify.oxaas.over.quota.100.html.tmpl
/opt/open-xchange/templates/notify.oxaas.over.quota.90.subject.tmpl
```

2.8 Package open-xchange-oxaas-mail-unread-ws

OXaaS mail custom mail servlet bundle This package implements OXaaS mail servlet to gather information via rest api.

Version: 1.6.12-1

Type: OX Middleware Plugin

Depends on:

```
open-xchange-cloudplugins (>=1.6.12)
open-xchange-core (>=7.8.4)
open-xchange-imap (>=7.8.4)
```

2.8.1 General Functionality

API to fetch the user related unread count for INBOX

List of features implemented by this plugin:

- API is reachable at `http://localhost:8009/preliminary/api/oxaas/mail/unread/<useridentifier>`
- API is secured by `oxaas-mail-unread.properties` where it is possible to add configuration for each brand that should have this feature enabled
- Set `com.openexchange.oxaas.mail.unread.ws.basic.usernames=hosterone`
- Set `com.openexchange.oxaas.mail.unread.ws.basic.hosterone.brand=internalBrandForhosterone`

- Set `com.openexchange.oxaas.mail.unread.ws.basic.hosterone.password=verySecretPassword`

2.8.2 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-oxaas-mail-unread-ws
```

2.8.3 Configuration

For details, please see appendix [A](#)

`/opt/open-xchange/etc/oxaas-mail-unread.properties` (page [29](#))

2.9 Package open-xchange-oxaas-mail-ws

OXaaS mail custom mail servlet bundle This package implements OXaaS mail servlet to gather information via rest api.

Version: 1.6.12-1

Type: OX Middleware Plugin

Depends on:

```
open-xchange-cloudplugins (>=1.6.12)
open-xchange-core (>=7.8.4)
open-xchange-imap (>=7.8.4)
```

2.9.1 General Functionality

This plugin provides a middleware restfull API to retrieve details of customerdata.

List of features implemented by this plugin:

- Main entry point is **`/api/oxaas/mail`**
- secured by basic auth mapped to customer brand
- **`/api/oxaas/mail/{uid}/recentmails`** returns latest 5 mails in INBOX
- **`/api/oxaas/mail/{uid}/quota`** returns current mailbox quota
- **`/api/oxaas/mail/{uid}/newmessages`** returns the number of new mails since last login
- **`/api/oxaas/mail/{uid}`** all of the above combined

2.9.2 Installation

Install on OX middleware nodes with package installer **apt-get** or **yum**:

```
<package installer> install open-xchange-oxaas-mail-ws
```

2.9.3 Configuration

For details, please see appendix [A](#)

`/opt/open-xchange/etc/oxaas-mail.properties` (page [29](#))

A Configuration Files

File 1 /opt/open-xchange/etc/plugin/mailstore-cloudplugins.properties

```
1 MAILSTORE_CLOUD_STORAGE=com.openexchange.admin.cloudplugins.storage.mysqlStorage.
   MailstoreMySQLStorage
```

2 com.openexchange.authentication.cloudplugins.host.regex= [0-9a-zA-Z.]*
3
4 #Regex to validate user name
5 com.openexchange.authentication.cloudplugins.user.regex= [0-9a-zA-Z.@]*
6
7 # Setting to control the start of the own authenticationService which would be used as a
   fallback in the Tracker if started
8 # Default: true
9 com.openexchange.authentication.cloudplugins.enableauthentication=true
10
11 # Comma seperated blacklist of hostnames that should not be handled by the default
   authenticationService
12 # Default: <empty>
13 com.openexchange.authentication.cloudplugins.authentication.blacklist=
14
15 # Setting to control the start of the CloudAuthenticationDriverTracker
16 # Default: true
17 com.openexchange.authentication.cloudplugins.enable.authentication.tracker=true
18
19 # Configure the LDAP lookup method to find users using their logins.
20 # It is the method that is used by default when there is no brand specifi
   # configuration setting).
21 #
22 # Optional, defaults to "uid".
23 #
24 # Possible values:
25 # uid
26 #   attempts to find users by matching their login against the uid attribute.
27 # email
28 #   attempts to find users by matching their login against the alias attribute.
29 # auto
30 #   when the login contains a "@", the "email" method is used and when not,
31 #   the "uid" method is used
32 # uid-or-email
33 #   attempts to find users by matching their login against the uid and the alias
34 #   attributes (either may match)
35 #
36 # Note that this only applies to the default authentication driver. If there
37 # is a custom implementation that is used for a given brand, its behavior is
38 # not influenced by this properties.
39 #
40 # Example:
41 # com.openexchange.authentication.cloudplugins.authentication.uid.mode=auto
42
43 # One may define any number of such settings per brand by setting properties
44 # with the following format for their name:
45 #
46 # com.openexchange.authentication.cloudplugins.authentication.uid.mode.<brand>=<uid|email|
   auto|uid-or-email>
47 #
48 # For the list of possible values, please consult the documentation for
49 # com.openexchange.authentication.cloudplugins.authentication.uid.mode
50 #
51 # Optional, defaults to falling back to the method configured in
52 # com.openexchange.authentication.cloudplugins.authentication.uid.mode
53 #
54 # Note that this only applies to the default authentication service driver.
```

```

56 # If there is a custom implementation that is used for a given brand, its
57 # behavior is not influenced by these properties.
58 #
59 # Example:
60 #
61 # com.openexchange.authentication.cloudplugins.authentication.uid.mode.brand1=auto
62 # com.openexchange.authentication.cloudplugins.authentication.uid.mode.brand2=uid

```

43 #
44 # Note that this only applies to the default authentication driver. If there
45 # is a custom implementation that is used for a given brand, its behavior is
46 # not influenced by these properties.
47 #
48 # Example:
49 # com.openexchange.cloudplugins.nginx.auth.servlet.uid.mode.brand1=auto
50 # com.openexchange.cloudplugins.nginx.auth.servlet.uid.mode.brand2=uid

```

File 8 /opt/open-xchange/etc/cloudquotaservice.properties

```

1  # Identifier of the default quota driver to use when not
2  # superseded by a per-brand configuration setting (see below).
3  #
4  # This configuration property is optional.
5  # When it is not set, it will attempt to use the "dovecot"
6  # driver, if available (installed).
7  # If the "dovecot" driver is not installed, it will use the
8  # highest ranked driver that is installed.
9  #
10 # For a deterministic approach, it is recommended to set
11 # a value for this configuration setting.
12 #
13 # Example:
14 # com.openexchange.cloudplugins.quota.default.driver=cassandra
15 com.openexchange.cloudplugins.quota.default.driver=
16
17 # Override the quota driver per brand.
18 #

```

```

19 # Use property names that start with
20 # "com.openexchange.cloudplugins.quota.driver."
21 # followed by the brand name (not the complete DN
22 # but just the brand name).
23 #
24 # These are optional and, if not defined, will always fall
25 # back to the driver configured in the property
26 # com.openexchange.cloudplugins.quota.default.driver
27 #
28 # Example:
29 # com.openexchange.cloudplugins.quota.driver.brand1=cassandra
30 # com.openexchange.cloudplugins.quota.driver.otherbrand=cassandra
31 #

```

File 9 /opt/open-xchange/etc/cloudquotaservice-cassandra.properties

```

1 # Use the legacy "type" value for lookups in the Cassandra
2 # quota table.
3 # In recent deployments, the "type" parameter is "dovecot_mail",
4 # but in previous installations, the "type" used to be null.
5 # Setting this property to true will use null for the "type"
6 # query parameter.
7 #
8 # This property is optional and when not set, defaults to false.
9 #
10 # Example:
11 # com.openexchange.cloudplugins.quota.use.legacy.type=true
12 #
13
14 com.openexchange.cloudplugins.quota.use.legacy.type=false
15
16 # Unified quota performance optimizations.
17 #
18 # The default behavior is to check whether every single user
19 # who's usage quota is retrieved has unified quota enabled or not,
20 # and return data accordingly.
21 #
22 # In most use cases, if not all, unified quota will be enabled or
23 # disabled uniformly
24 # - globally for a platform,
25 # - or globally for a brand,
26 # - or for a whole context,
27 # in which case the implementation can avoid or minimize the amount
28 # of queries it needs to perform in order to determine how to
29 # calculate the quota usage, depending on whether unified quota
30 # is enabled or disabled for a user.
31 #
32 # Two configuration settings govern this behavior:
33 # - the default behavior which is used for every brand on a platform
34 #   (com.openexchange.cloudplugins.quota.unified.quota)
35 # - per-brand behaviors which take precedence over the default
36 #   (com.openexchange.cloudplugins.quota.unified.quota.<brand name>)
37 #
38 # Each of those settings can have one of the following values:
39 #
40 # always
41 #   the implementation will assume that unified quota is enabled for
42 #   all contexts within the brand, or for all contexts within all
43 #   brands if applied to the default setting
44 #
45 # never
46 #   the implementation will assume that unified quota is disabled for
47 #   all contexts within the brand, or for all contexts within all
48 #   brands if applied to the default setting
49 #
50 # context
51 #   the implementation will only check whether unified quota has
52 #   been enabled for the context the user(s) are in, and not for

```

```

53 #   each individual user, assuming that all users within the same
54 #   context are always configured uniformly regarding unified quota,
55 #   be it enabled or disabled
56 #
57 # user
58 #   the implementation will make no assumptions and check whether
59 #   unified quota is enabled or not for every individual user -- this
60 #   is the safest setting, which is why it is the default, but also
61 #   the slowest and should be avoided if possible
62 #
63 # The default setting can be configured using the property
64 # com.openexchange.cloudplugins.quota.unified.quota=...
65 #
66 # It is optional and defaults to "user" (as explained above) if
67 # omitted, commented out or left empty.
68 #
69 # Example:
70 # com.openexchange.cloudplugins.quota.unified.quota=never
71 com.openexchange.cloudplugins.quota.unified.quota=
72
73 # Per-brand settings can be configured using the following
74 # prefix, followed by the name of the brand:
75 # com.openexchange.cloudplugins.quota.unified.quota.<brand name>=...
76 #
77 # Example:
78 # com.openexchange.cloudplugins.quota.unified.quota.my_brand=always
79 # com.openexchange.cloudplugins.quota.unified.quota.my_other_brand=context
80 #
81 # Those are obviously optional and default to using the default
82 # setting above (which, in turn, when omitted, defaults to "user").
83 #

```

27 ### Redirect Blacklist Driver ###
28 #
29 # Set to true to enable config cascade for all properties of the Redirect Blacklist Driver
30

```

```

31 # This should be used to set different configurations per brand or an even lower level.
32 # This property is NOT config cascade aware as it is used to control use of it.
33 # Even the driver brand list property can be config cascade if this is enabled which would
    be useful
34 # to enable it for a brand, but disable it for some users
35 #
36 # Optional - default is false
37 com.openexchange.cloudplugins.mailfilter.intercept.drivers.redirect.blacklist.driver.
    configcascade.enable=false
38 #
39 # The comma+space delimited list of regular expressions that are blacklisted for mail
    filter redirects.
40 # Java regular expressions are supported here, so non regex characters must be escaped.
41 # Example: abuse@.*, spam@domain\.com <-- '.' has been escaped to match only '.' and not
    any char
42 # See for regex constructs: https://docs.oracle.com/javase/7/docs/api/java/util/regex/
    Pattern.html
43 # WARNING: You must use ", " (comma and a space) as the separator to separate the regexs
44 #
45 # Optional - default is empty which should only be left if this driver is not used
46 com.openexchange.cloudplugins.mailfilter.intercept.drivers.redirect.blacklist.driver.
    blacklist=
47 #
48 # Set to true to only blacklist true autofoward rules which are defined by having the "
    autofoward" flag.
49 # If set to false, then all redirect rules will be checked for the blacklist addresses
50 #
51 # Optional - default is true
52 com.openexchange.cloudplugins.mailfilter.intercept.drivers.redirect.blacklist.driver.
    autofoward.only=true
53 #
54 ### End Redirect Blacklist Driver ###
