2. Additional Information

OX Spreadsheet is a browser based, cloud ready, spreadsheet product that can work with Microsoft Excel documents in a lossless way. And you can also collaborate with other people to edit shared spreadsheets on various devices.

Learn more about the highlights of OX Spreadsheet here:

http://software.open-xchange.com/products/appsuite/doc/OX_Spreadsheet_Beta_Guide.pdf

Attention: As with most Beta software, we cannot recommend the use of OX Spreadsheet Beta in production environments. Please note that this package also includes a preview version of OX Text 1.2, which is also not feature-complete and not ready for production environments.

3. Benefits and Main Functions

3.1. Features and benefits of OX Spreadsheet

- Web-enabled spreadsheet app, fully integrated in OX App Suite
- Import of styles and formatting from Excel (.xlsx) documents
- Flexible cell formatting options: background, font, text attributes, text alignment and borders

- Collaborative spreadsheet sharing with exclusive editing rights
- Imports charts from Excel
- Merge cells
- Hyperlinks
- Status bar with AutoSum and AutoCount
- Insert and resize images
- Search & Replace
- Undo & Redo
- Format painter

- Split and fix view
- AutoFill technology

4. Availability

4.1. Pricing and Availability

Users OX Spreadsheet Beta is part of the OX Documents product offering with OX Text already released. The Beta is available for free and can be used for testing. Currently it is planned to release the final version beginning of Q2 2014. Please contact your OX Sales representative for further information.

5. Download & Installation

Please follow the instructions to install the new version:

http://oxpedia.org/wiki/index.php?title=AppSuite:Spreadsheet_Installation_Guide

6. Known Issues

- Import of OpenOffice Calc documents not supported yet
- Preview of empty spreadsheets is not possible
- Spreadsheet preview only supports English locale
- Autosum does not take the number format of summed up cells
- Charts:
 - Not all chart types are supported, 3D- charts are not supported and mapped to 2D charts
 - Central point of axis not always correct
 - Positioning of axis label and legend might differ
 - Changing chart types not possible in Beta
- Undo/Redo not fully implemented yet
- Clipboard support not fully implemented, pasting into Apache OpenOffice does not support formulas
- Big, complex spreadsheet might not work

7. Changes applied
