1 Shipped Product and Version

Open-Xchange AppSuite backend 7.4.2-rev35

Open-Xchange AppSuite frontend 7.4.2-rev27

Open-Xchange AppSuite USM 7.4.2-rev13

2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2134.

32897 Synchronizing CalDAV fails with OSX 10.10

The latest version of the Mac OS X Calendar application has issues parsing an empty VALARM component in the default alarm properties of CalDAV collections.

This has been fixed by sending empty string for default alarms in CalDAV.

33028 Moved folder will re-appear at old location after next sync

Move of a mail causes implicit folder changes that conflicted with move of that folder.

Now USM automatically marks the folder hierarchy as modified when mail item is moved between folders.

33036 Unknown setting path folder/blacklist" error seen in logs when GAB is disabled using key io.ox/core//folder/blacklist/6=true

Any load or save-back attempt targeting a setting that is non-existent in config tree lead to a USS-0004 "Unknown setting path XYZ." error being generated at Open-Xchange Server.

This has been fixed by introducing convenience methods to optionally resolve a setting and to ignore any load/save-back operations if such a setting is non-existent.

33383 On iPad: New twitter account page does not display

Now the server responds with a redirect if "redirect=true" is provided by client, the UI directly opening popup with standard URL now, relies on redirect=true and proper redirecting.

33967 Sent-mails folder is not being synced. Unknown USM status 17

102 Processing interim responses were responded to requesting USM client although not needed. Such interim responses breaks response parsing with used HttpClient instance.

This has been fixed by avoiding 102 Processing interim responses for requests executed by USM component. Such requests are identified by having the "User-Agent" header set to "Open-Xchange USM HTTP Client".

34365 SVL-0011 Categories=ERROR Message='Unexpected error: Can't convert from null'

Use native converter for null values.

Please be aware that we cannot definitely say if the mentioned change was really the culprit for the observed error messages. We just got a stacktrace, without any further information about reproducibility, and this is where the changes were based on.

34565 Insert image functionality on new email is not working

Non dynamic selector were used.

Solution: search available iframes for concrete input node with id 'src'.

3 Tests

Not all issues that got resolved with this Patch Release could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported issue when deploying to a staging or production environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

32897, 33028, 33036, 33383, 33967, 34365, 34565,
