

## **Release Notes for Patch Release #2292**

December 1, 2014

### **Security Patch Release**

This Patch Release addresses critical vulnerabilities; please consider deploying it as soon as possible. Not deploying this Patch Release may result in remote service exploitation, security threats to users and exposure of sensitive data.

Detailed vulnerability descriptions will be publicly disclosed no earlier than five (5) working days after public availability of this Patch Release. There is no indication that one or more of these vulnerabilities are already getting exploited or that information about them is publicly circulating.

## 1 Shipped Product and Version

Open-Xchange AppSuite backend 7.6.0-rev32

## 2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2264.

### **35512 CVE-2014-8993**

CVSSv2: 5.7

### **35490 Parallel calls to that list mail folders might fail when the default folders can not be created**

Concurrent checks for mail standard folders could cause race condition to happen.

Solution: Synchronize calls when checking mail standard folders. This is related to a customer specific MAL implementation.

### **35176 EAS provisioning profile cannot be signed**

To allow quick and flawless rollout of EAS provisioning profiles, the profile generator now allows to include intermediate certificates when cryptographically signing the profile.

### **34035 Unable to move mails to the Spam folder**

Depending on the spamhandler solution, certain mails could not be moved to the spam folder automatically on request. This was caused by incorrect handling when accessing the mails source and has been solved.

## 3 Changes relevant for Administrators

### 3.1 Changes of Configuration Files

#### **Change #2297 Option to add intermediate certificates when signing provisioning profiles**

Added the property `com.openexchange.mobile.configuration.generator.PemFile` (Default: empty) to `eas-provisioning.properties` file that specifies the "-certfile" argument for the OpenSSL call

## 4 Tests

The Open-Xchange QA team has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## 5 Fixed Bugs

35512, 35490, 35176, 34035,
