2 Bugs fixed since previous Public Release

This document provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2474.

35638 "Reject with reason" available to users even if backend is not capable

Even unsupported actions could be selected by the user.

A check for supported actions was implemented. Now only these are displayed to the user.

36985 Virtual/all folder can not be found on mailserver

Possibly existing IMAP folder were not contained in LIST/LSUB commands.

This has been solved by rechecking folder existence via explicit EXAMINE.

37102 User is unable to import or add email signatures

Special "FLS-0017" error code was not appropriately handled by file-backed snippet management.

Solution: Improved handling for special "FLS-0017" error code.

37172 Importing ownCloud vCards cause lost of phone numbers

If the type parameters are missing there was no fallback to the default 'voice' as mentioned in RFC 6350.

This has been solved by assuming type 'voice' in VCard import if type parameters are missing and tag types 'home', 'work' or 'other' are set.

37347 Drive - folder tree not usable on 10" displays with 1024x600 resolution

Wrong device statement did hide the "View" option.

This has been fixed by removing wrong device directive in toolbar to show "View" option in toolbar again.

37406 Adding picture to signature: null error

This has been solved by ignoring already processed images when updating a snippet.

37443 Xing: not possible to send invitation to multiple addresses

Request does not consider multiple selected contacts.

Solution: The invite button is hidden if multiple contacts or a distribution list is selected. This decision is based on the fact, that the invitation of multiple contacts has some edge cases which requires special error handling. If the user invites several other users and only one of those users cannot be invited (missing email, user is already invited) the error message only contains the error. The user is not informed about the other invitations.

37445 Email&Calendar: Mouse is showing wrong symbol

This has been fixed by adding missing href attribute.

37469 Appointment and "Send mail to all participants" does not resolve first/last name of external contact

This was caused by using wrong css.

This was solved by removing useless rules.

37471 Search in IE11: dropdown list disappears

Blur handler is executed when search field leaves focus.

Solution: Disable blur handler for search field when dropdown is open.

37537 NPE while searching "mail text"

javax.mail.Folder was changed in a way that its constructor calls methods on a passed parameter since version 1.5.2. The inheriting class com.openexchange.mail.mime.FullnameFolder always passed null as parameter and caused the NPE.

This has been fixed by removing com.openexchange.mail.mime.FullnameFolder and introducing a proper abstraction without inheritance.

37577 HTTP/0.9 400 Bad Request

By default Apache and Grizzly are configured to limit http headers to 8192 bytes, Apache exposes this as config value though. After increasing the Apache limitation requests with headers larger than 8192 bytes would still fail as they caused an IllegalStateException in Grizzly.

Now the maximum http header size is configurable.

37585 Missing warning by trying to save unfinished mail filter configuration

It was possible to create incomplete mailfilter rules that apply to all mails.

Now the save button is disabled as long as an incomplete filter is found.

37616 HTML-signature mask errors

Some custom css is not correctly interpreted by Firefox.

Removed custom css which breaks mask layout fixed this error.

37624 HTML-Signature shows hint only in English language

Missing gettext call was added and solved this problem.

37644 Trusted email: mail?action=threadedAll request with x-tdresult column fails

Problem was: No support for header names in "columns" parameter for action=threadedAll.

This has been fixed by supporting header names in "columns" parameter for action=threadedAll as well.

37654 Invalid email address" error when setting a previous working Taxonomy

Unnecessary checks for mail address validity although not changed/touched at all.

This has been solved by not performing checks for mail addresses if not touched/changed on user change operation.

37738 After changing mail view to "list" it can not be changed back to "compact"

this.model might be called on disposed view.

Solution: Check for this.model first.

37758 Different handling of html and plain text signatures

To prevent data loss, it was checked whether a signature has been changed. This check failed for html-signatures.

This has been fixed by comparing signatures by using plain text.

37790 Calendar: delete email address with backspace key -> url of the page jumps one site back

Added missing keyhandler for backspace to fix this issue.

37907 Change password within GUI shows error "the current password is incorrect" , even if the pw was correct, and the pw got changed

PasswordChangeService was called twice.

Now PasswordChangeService is only called once.

37501 Provisioning fails when using AUTO_TO_LOWERCASE_UID=true

The "AUTO_TO_LOWERCASE_UID" settings were not considered consistently on user, group, and re-

source create and change operations as well as on look-up by name and authentication.
Solution: Consider "AUTO.TO.LOWERCASE.UID" settings all over the place.

37399 Checkboxes not active for Tasks and Address book

After using the view - checkboxes switch the editable state was not always set correctly.
Now the editable state is set correctly.

37616 HTML-signature mask errors

Some custom css was not correctly interpreted by FF.
This has been fixed by removing custom css which breaks mask layout.

37644 Trusted email: mail?action=threadedAll request with x-tdresult column fails

There were no support for header names in "columns" parameter for action=threadedAll.
Solution: Support header names in "columns" parameter for action=threadedAll as well.

3 Changes relevant for Administrators

3.1 Changes of Configuration Files

Change #2492 Make maximum http header size configurable

add new configuration parameter to grizzly.properties
The maximum header size for an HTTP request in bytes. Make sure to increase
this value for all components of your infrastructure when you are forced to
deal with enormous headers. For Apache as our default balancer see
<http://httpd.apache.org/docs/current/mod/core.html#limitrequestfieldsize>
Default value: 8192
com.openexchange.http.grizzly.maxHttpHeaderSize=8192

4 Tests

Not all defects that got resolved could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

35638, 36985, 37102, 37172, 37347, 37406, 37443, 37445, 37469, 37471, 37537, 37577, 37585, 37616, 37624, 37644, 37654, 37738, 37758, 37790, 37907, 37501, 37399, 37616, 37644,
