2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #2982.

42279 Update to share links does not update the .drive-meta file

A share link's expiry date and password is not stored within the targeted file or folder, but within the anonymous guest user account associated with the link. An update of those properties does not affect the targeted file or folder, so that their sequence number remains unchanged.

This has been fixed by "Touch" underlying item if password or expiry of share link has been updated.

42462 Click on small cloud next to subscriptions folder - no settings displayed

The id of the folder was not correctly calculated and the settings were not displayed.

Now the correct id is calculated and the settings are displayed.

42994 Sieve script can not be saved in Appsuite-UI due to a syntax error

An empty string for the users full name (Sur_name and Given_name is empty) results in an error while trying to set the vacation notice "from" field.

Solution: If the string for the users full name is empty only the email is set as value for the "from" field to store the vacation notice.

41709 Portal mail widget is empty

After moving mails to inbox, the inbox collection is set to expired and is cleared. Afterwards, the widget collection did not contain any mails which results in the unexpected message: 'No mails in inbox' and no email is displayed in the portal widget.

This has been fixed by reloading mail data when collection is set to expired. This fix does also include the handling, when mails are moved to the folder which is displayed in the portal. The target folder is then updated.

42653 Cannot save attachment to drive

The fix of another issue required to call a different method overload of an internal service routine, but passed a null reference for a parameter which wasn't expected by one concrete implementation. This caused the error when trying to save a file from an email to drive.

Solution: Orderly pass set columns when saving attachment to drive.

42773 Mandatory wizard not allowing to see UI after login and user info added

First start wizard never finished/resolved and timezone settings were not stored correctly.

This has been fixed by resolving/rejecting the state of firstStart wizard correctly and use the correct settings model to store settings permanently.

42857 Drive Guest Mode Invitation Mails Theming: button not themed

Fixed button template to allow theming of this button.

43126 Calendar print List - view not possible

Calendar only supported a detailed print view.

This has been fixed by implementing a new compact printing view.

43226 Auto save draft fails on some HTML Mails

mapObject was missing and caused the error when saving HTML mails.
This has been fixed by adding underscore mixin.

43387 Mails w/o external content can show the load-external-images button

Wrong return value in CSS sanitizing routine caused a displayed image button without any function.
Solution: Fixed check if CSS content has actually been modified.

3 Tests

Not all defects that got resolved could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

42279, 42462, 42994, 41709, 42653, 42773, 42857, 43126, 43226, 43387,
