2 Bugs fixed since previous Public Release

This section provides a summary of bugfixes and changes that have been applied subsequently to shipping Patch Release #3073.

41506 "Kein Empfänger" within from filed

Empty mail information in case a mail gets deleted from a mailbox which was about being retrieved. This has been fixed by introducing validity check for retrieved mails and ignore those which apparently do not hold consistent information.

42252 Translation for "Number of messages" for folder Properties not available for other languages

Now "Number of messages" is translated in all supported languages.

43028 Reload /re-login is necessary to access your external mailbox after password change

After changing the userpassword a reload was needed to display an external emailaccount. Now the folder tree gets refreshed after a password change.

43228 Outlook Sync never ends, "standard folder types are currently not available" messages in logs

JSONSession was handled like a EASSession in case of user changes. This has been fixed by calling the correct initialization function for both types of sessions.

43327 Drafts not displayed correctly after auto-save

Drafts folder was not instantly reloaded and every draft mail gets a new ID. This has been fixed by reloading drafts folder on auto-save and save-as-draft.

43477 Reporting does not work if Hazelcast not active

Only a hazelcast implementation is available for appsuite style report. As a solution that does not have a big impact the appsuite report will be skipped and the old style (db based) report will be executed if Hazelcast is not available. This solution is only valid (for now) for latest 7.8.0 and upcoming 7.8.1. With a later version a local implementation for the appsuite style report will be provided.

43517 Email get sporadical deleted after forwarding

App Suite UI passed wrong send-type when actually sending a message forward, which got auto-save before. The sendtypes and msgrefs are being correctly sent now.

43776 "Ignore existing events" not translated when importing tasks

Now "Ignore existing events" is translated in all supported languages.

43836 Distribution list with 1 letter within the local part of the email not working

Less or equal in check should only be less.
Fixed in bootstrap-tokenfield lib.

43855 Changeuser commandline tool does not work correctly for setting drive quota

Specifying a quota for a user (which has individual quota set before) triggers an asynchronous job in the background in case setting "ALLOW_CHANGING_QUOTA_IF_NO_FILESTORE_SET" is set to "true". Therefore the "changeuser" command-line tool completes although background job has not yet been finished.

This has been fixed by performing that job synchronously for "changeuser" invocation.

44046 Duplicate entry for key 'context_name_unique'

An attempt to load context groupware data fails for stale/orphaned context entries, which prevent from fully deleting such contexts.

This has been fixed by allowing to cleanse stale/orphaned contexts.

44100 Not possible to deactivate 'Archiv' Folder in 7.8.0

Don't offer "Archive" in folder context menu if capability "archive_emails" is missing. Added capability check for "archive_emails" to mobile toolbar actions.

3 Changes relevant for Administrators

3.1 Changes of Configuration Files

Change #3134 Introduced configuration property to specify whether a fall-back to in-app sort is supposed to be performed

Introduced configuration property "com.openexchange.imap.fallbackOnFailedSORT" to file 'imap.properties' to specify whether a fall-back to in-app sort is supposed to be performed in case IMAP "SORT" command gets quit with a "NO" response. Default value is "false"- meaning to return an appropriate error to requesting client.

4 Tests

Not all defects that got resolved could be reproduced within the OX QA lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server setup for system and integration testing.

All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

41506, 42252, 43028, 43228, 43327, 43477, 43517, 43776, 43836, 43855, 44046, 44100,
