## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4327.

### **51093 External DriveAccount on mobile: button „Switch to parent folder“ leads to Hidden-Root**

The root folder is "9" for Drive, but for external storages "1". When the root is reached, the overview is shown. It was only checked by 9 if the root is reached.  
This has been fixed by checking also for folder.id 1 for external storages.

### **55100 After update logback errors like "Could not register LogbackConfigurationMBean"**

In case "com.openexchange.java-commons.logback-extensions" bundle has not been started an attempt to register its MBean fails.  
Solution: Await availability of Logstash Socket Appender instance prior to attempting to register its MBean.

### **55162 Inline images at HTML mails disappear after a short time**

Sometimes added Inline images disappeared while composing a new email.  
Do not advertise "Content-Length" header for retrieved images from mail storage as associated MIME part does not provide exact size to solve this issue.

### **55175 Mail Module does not render thumbnails for .txt**

This has been solved by adding txt to regex of supported file extensions for preview.

### **55229 Japanese text is garbled in AppSuite**

Some Japanese characters are not display correctly (garbled) in emails.  
This has been fixed by using "x-windows-iso2022jp" charset in case Java's "iso-2022-jp" charset yields unmapped characters.

### **55254 Rename / delete folders in ox drive not possible**

Creation of trash and public folders on demand was removed.  
This has been solved by reenabling the creation of trash and public folder on demand.

### **55265 Massive high load on configdb - DB ReadSlave**

Excessive querying of all context identifiers, likely caused by unnecessarily "per node" initialization of default attachment storage cleaner.  
Solution: Efficient retrieval of distinct context identifiers per schema and refactored default attachment storage cleaner to be managed as cluster task (runs only once, no more per node).

## 3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.  
To avoid side effects, the shipped packages have gone through automated regression test on both,

a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

## **4 Fixed Bugs**

51093, 55100, 55162, 55175, 55229, 55254, 55265,
