## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4354.

### **55551 "Expires" drop-down in share link dialog not displayed in IE11**

MS Internet Explorer 11 has problems with auto height when bottom css attribute is set to 100%. This has been solved by setting bottom to auto if the browser is IE 11.

### **55455 Contacts export and have EOL**

LF character was used as line terminator in exported CSV files. Outlook was not able to handle those files.

This has been solved by using CRLF sequence as line terminator in exported CSV files.

### **55453 Open-xchange-cluster-upgrade package not seen for 7.8.3 to 7.8.4 upgrade**

Added missing Hazelcast invalidation packages and accompanying bundles for v7.8.3 and v7.8.4 to solve this issue.

### **55425 Unclear behaviour on versioning when uploading files upper/lower case**

File name check was case-sensitive.

Now file names check ignoring case to have a standardized procedure.

### **55363 Default text style are not retained in compose page after pressing backspace**

Styles were applied manually and get cleared after deleting the last letter in mailcompose.

This has been fixed by using tinymce option 'forced\_root\_block\_attrs' and apply custom style and identifier class.

### **55345 Dovecot allows to add more rules than configured for redirect in sieve.max.redirects**

Middleware ignored MAXREDIRECTS.

Now Middleware limits redirect commands and "redirect" actions are limited according to the MAXREDIRECTS setting.

### **55285 Wrong sender account when replying to email addresses with upper-case letters**

Check was case sensitive.

This has been fixed by comparing case insensitive and fix the sync-async problem for the fallback.

### **55273 Logout ends up in a white page**

Was caused by a problem with deleted files of running OX Documents when logging out.

This has been solved by rejecting promise in this error case in the quit handler.

### **54750 TO: with IDN scrambled after reply**

The mail sent by thunderbird does not contain the ASCII representation of the mail address. Instead it contains the unexpected IDN representation.

This was fixed in javax.mail as it deals with unexpected mail content. Try to parse with the default java charset. If ASCII is provided (as expected) nothing will change.

## 3 Changes relevant for Operators

### 3.1 Changes of Packaging

#### **Change #SCR-48 Added Hazelcast invalidation packages and accompanying bundles for v7.8.3 and v7.8.4**

Added Hazelcast invalidation packages and accompanying bundles for v7.8.3

Package: open-xchange-cluster-upgrade-from-783

Bundles: com.openexchange.hazelcast.upgrade371

Added Hazelcast invalidation packages and accompanying bundles for v7.8.4

Package: open-xchange-cluster-upgrade-from-784

Bundles: com.openexchange.hazelcast.upgrade381

## 4 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

## 5 Fixed Bugs

55551, 55455, 55453, 55425, 55363, 55345, 55285, 55273, 54750,
