2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4447.

56041 Disableschema java.sql.SQLException: No value specified for parameter 14

The counter was not counting the parameters correctly when compiling the SQL statement.

This has been solved by using the correct counter for cid when disabling schema.

55928 User email is visible in URL

It was possible to see the Guest user's E-Mail address in an URL parameter.

This has been fixed with replacing E-Mail address with 'user-id@context-id' tuple and adjusted resolve logic accordingly.

55835 Folder rename in external accounts very slow

Inefficient check for duplicate/equally named folders and inefficient folder retrieval as well.

This has been fixed by improving performance when updating a folder and fetching folder list afterwards.

55631 Unable to add external account due to fixed overlay

Fixed typo in login call parameters to solve this issue.

55532 Redirection not working on chrome but works on Mozilla

Links accidentally considered as harmful.

Managed a dedicated list of identifiers for possible global event handlers to get all those links working again.

55433 Dutch Backend Translation Problem

Was resolved by adjusting Dutch Backed translation.

55044 OXTender for Outlook destroys SMIME signature

Possible empty line after multipart preamble was not maintained.

Force a blank line before start boundary when writing out multipart content to solve this issue.

3 Changes relevant for Operators

3.1 Changes of Configuration Files

Change #SCR-53 Introduction of a configurable list of identifiers for possible global event handlers

Introduced file "/opt/open-xchange/etc/globaleventhandlers.list" providing a listing of identifiers for possible global event handlers. That list and internally managed default list is then used to check for a possible occurrence of a global event handler that might trigger JS execution.

4 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behaviour. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

56041, 55928, 55835, 55631, 55532, 55433, 55044,
