2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4863.

59914 Compromised Account Email Headers

App Suite UI passed wrong information to Open-Xchange Server in case personal part of "From" address contains brackets as a workaround for another old issue. This has been solved by removing the workaround.

59833 Not possible to add pop3 account

Trying to issue an 'EXAMINE' command against a non-existent folder yields a 'javax.mail.FolderNotFoundException'. This has been fixed by treating a possible 'javax.mail.FolderNotFoundException' as folder cannot be opened.

59756 Sieve Rule with "redirect" and "keep" are changed to "redirect :copy"

When creating the auto-forward rule it was not checked if the used sieve action "copy" exists. Now, if the sieve action "copy" is not available the combination "redirect" / "keep" is retained to solve this issue.

59753 Error when dragging mail from an externally linked account

The lsub entry couldn't be resolved because of a naming mismatch: "Inbox" vs "INBOX". This has been fixed by storing lsub entries also under the original fullname, so no error is displayed while moving mails from external accounts.

59692 Archive folder not created automatically

Trying to issue an 'EXAMINE' command against a non-existent folder yields a 'javax.mail.FolderNotFoundException'. This has been fixed by treating a possible 'javax.mail.FolderNotFoundException' as folder cannot be opened.

59684 Draft email with vcard sending not working

The "vcard" parameter was parsed and written differently. Solution: Lenient evaluation of "vcard" parameter.

57850 Logging out as test user (sometimes) not possible

Mail compose did not unregister its logout extension point if startup fails. This causes the logout to abort as the extension is still there for a non-existing mail compose instance. This has been fixed by removing logout extension if app startup fails.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both,

a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

59914, 59833, 59756, 59753, 59692, 59684, 57850,
