2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4897.

60695 High Garbage Collection activity after upgrade

Prevent infinite loop on certain bad IMAP responses to solve this issue.

60380 Address book sort order is different based on the number of contacts

Sortname was the same with multiple contacts, so no clear sorting order.

This has been fixed by adding the first valid mail address as second sorting criteria, if sortnames are the same.

58895 Contacts with Email 2 field in distribution list do not populate

No filtering and yells for those emails.

This has been solved by adding yells and filtering.

60745 Database migration fails with max key length

No explicit change of column length in keys on liquibase changesets.

This has been fixed by changing key definition.

60789 Inconsistent Chronos update task dependencies

Documentation was not up to date about newly added update tasks.

Updated Documentation.

60565 No UI message if pop account not working

The error handler for errors like this was missing.

This has been solved by adding the missing error handler. If an account is unfunctional a popup appears announcing the error. In case of a pop3 account this happens after the configured refresh interval.

60718 Strange error message when Quota is exceeded

Simplified the message. Message is not translated in every language yet.

60277 Vcard gets attached multiple times

Wrong vCard file name representations are compared.

This has been solved by checking proper vCard file name representations.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

60695, 60380, 58895, 60745, 60789, 60565, 60718, 60277,
