2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #4973.

61385 Automatic sign out feature is not using custom logoutLocation

location.reload aborts redirection.

This has been solved by forcing reload only when current host and pathname matches target url.

61414 Autoforward rule written by older version does not show as checked

An auto-forward rule with { id: 'keep' } was not displayed correctly.

This has been fixed by adjusting so that both versions of the keep behavior ({ id: 'keep' } and copy: true) can be written and displayed correctly according to what is available on the system.

61720 High CPU usage on middleware nodes - lot of long-running mail parsing threads

Used regular expression while performing html-to-text conversion may keep a thread running excessively long.

This has been solved by applying configurable* HTML parser timeout also to html-to-text conversion. If timeout kicks-in a fall-back html2-text conversion is performed.

*) See setting "com.openexchange.html.parse.timeout" (defaults to 10 seconds).

61799 Sending email to participants with only second email not possible

It was not possible to send an email to an appointment participant if he had only a secondary emails address entered inside the address book.

This has been fixed by using provided data instead of fetching everything.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

61385, 61414, 61720, 61799,
