2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5018.

62263 Add mail account on mobile: buttons hide text field for input

Removes button 'manual' cause is it used as fallback in case autodiscover fails and should not be handled as a separate option for ux reasons.

62106 Ical import fails with 503 error

Out Of Memory when importing large iCal files.

This has been solved by reducing the used heap space. Detailed informations about the import limit "com.openexchange.imort.ical.limit" are available here:

See <https://documentation.open-xchange.com/components/middleware/config/7.10.1/index.html#mode=feature>

60826 Sharing is not fully capable to deal with "segmented updates"

This has been improved by some adjustments: For guest users first try the com.openexchange.share.migrationRedirectURL property and then fall-back (if necessary) to com.openexchange.server.migrationRedirectURL. Moved the check of the potentially absent c.o.share.migrationRedirectURL in the SegmentedUpdateService.

59228 Date picker in vacation notice dialog often selects wrong date

The timestamp with an already applied timezone was saved.

This has been solved by implementing the zone option of the current date test and use the UTC timestamp.

3 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

62263, 62106, 60826, 59228,
