2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5030.

62345 Html part of mail always shown

UI accidentally used 'noimg' or 'trusted' as value for api parameter 'view'. In case 'Allow html formatted emails' is disabled the only valid value is 'text', this was adjusted to fix this issue.

62305 Vacation alias settings are broken and no autoresponder for all mail addresses

The "select all" button has no effect on the vacation notice model due to a wrong naming. This has been fixed by changing the attribute name accordingly so the model can be handled correctly.

62263 Add mail account on mobile: buttons hide text field for input

Removes button 'manual' cause is it used as fallback in case autodiscover fails and should not be handled as a separate option for ux reasons.

62106 Ical import fails with 503 error

Out Of Memory when importing large iCal files.

This has been solved by reducing the used heap space. Detailed informations about the import limit "com.openexchange.imort.ical.limit" are available here:

See <https://documentation.open-xchange.com/components/middleware/config/7.10.1/index.html#mode=feature>.

60826 Sharing is not fully capable to deal with "segmented updates"

This has been improved by some adjustments: For guest users first try the com.openexchange.share.migrationRedirectURL property and then fall-back (if necessary) to com.openexchange.server.migrationRedirectURL. Moved the check of the potentially absent c.o.share.migrationRedirectURL in the SegmentedUpdateService.

3 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

62345, 62305, 62263, 62106, 60826,
