2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5148.

62746 changes in custom theme #2

Added a workaround for IE11 in the appcontrol.

63435 vacation notice cannot be changed after migration to 7.10

This was caused by a vacation notice which makes use of the date range (current date test) and the zone option in this test is missing. This happens if the vacation notice was created with a older appsuite version. A missing zone option will now be compensated based on the current values.

63452 Sharing Links / What's New Tour Errors

The menu entry for "What's new" and "Guided Tour" wasn't disabled for guest.

63965 SQLException Duplicate entry '3-3' for key 'PRIMARY'

The fix for this bug ensures that no duplicate entries are left in "filestore2user" table when trying to change its PRIMARY KEY.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

62746, 63435, 63452, 63965,
