## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5178.

### **61167 Mail folder could not be found: confirmed-spam**

Spam/ham information advertised mail account data even though no spam handler was available or concrete spam handler tells to not create such folders.  
This has been fixed by suppressing spam/ham information in mail account data if spam is disabled or no such folders are supposed to be created according to spam handler specification.

### **63387 Additional empty line on signature**

This is just an improvement for signatures: Signature with empty content (only whitespace) will not be added anymore.

### **63443 Feedback Module: Text message is not aligned properly when mouse is hovered on the rating/selecting rating icon in IE browser**

Some misinterpretation of css from IE 11 caused this issue.  
This has been solved by adding a css fix only for IE11 to handle this issue.

## 3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## 4 Fixed Bugs
