2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5341.

65776 Customer's footer isn't shown and too much empty space in the DEM

Table height:100% breaks mail detail view.

This has been fixed by adding style to reset table height in mail detail view.

65812 Wrong translation: Vacation notice / Afwezigheidsmelding

Changed translation to solve this.

65815 Vacation notice, show advanced options

According to RFC 822 the local part needs to be quoted in some cases. Since this was only done in the mw the value could not be interpreted correctly.

If the local part needs to be quoted this is now also considered in the Appsuite UI.

66139 Android login page wrong button color

It was used screensize instead of "real" smartphone detection.

This has been solved by switching to .smartphone class.

66258 Wrong tooltip in TinyMCE toolbar for emoticons

String was not translated correctly.

Fixed typo to solve this issue.

66294 Lots of MySQLIntegrityConstraintViolationException: Duplicate entry for key 'PRIMARY' after upgrade

When the default internal calendar account gets auto-provisioned concurrently when first being accessed simultaneously, a database error may be raised under certain circumstances.

This has been solved by re-checking pending auto-provisioning operations after conflicting insertions.

66306 Attaching an attachment in mail compose silently fails. WebUI error logs shows FLS-0024

A pending request blocked the window.

This has been solved by correctly handling the error and unblock the window. Also added documentation for this.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

65776, 65812, 65815, 66139, 66258, 66294, 66306,
