## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5439.

### **67058 Appointment notification email not synced to mobile device**

Mail was filtered out because it was interpreted as appointment invitation mail. Now mail is analyzed whether the appointment was created "on behalf" and then synced to client, but this works only for the main calendar of the "manager".

### **67397 Issue when MariaDB server is running with the --read-only option**

Read connection used for table cleanup.  
This has been solved by using write connection for table cleanup.

### **67418 Inline attachment problem with png file**

Image transformation failed because Java image reader is unable to parse PNG image binary. This has been fixed by handling special 'javax.imageio.IIOException' hinting to Java image reader failed to parse image binary. Return image non-transformed instead.

### **67422 Certain mail freezes/crashes ui**

Clientwise specified "max\_size" parameter has not been applied to plain text. Now applying given "max\_size" to plain text as well.

### **67542 com.openexchange.mail.remoteContentPerDefault not working**

This is only not working for the context admin while being created with 'createcontext', not for users commonly. Was caused by accessing context properties while context is created. This has been fixed by falling back to server level configuration if context is not yet created.

### **67650 Not able to add image to signature**

This was caused by DOMPurify removes src="blob:..."  
This has been solved by using data uri instead.

## 3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## **4 Fixed Bugs**

67058, 67397, 67418, 67422, 67542, 67650,
