2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5460.

67641 High Memory Use in CentOS 7 with too many files open

Memory gets flooded with many regular untagged IMAP responses, which are actually of no use. This has been solved by adding mechanism to drop regular untagged IMAP responses on command execution to avoid flooding memory with unused IMAP responses.

67650 Not able to add image to signature

DOMPurify removed src="".
This has been fixed by using data uri instead.

67994 SAML, OIDC : initService should add a JSESSIONID

Invoke 'javax.servlet.http.HttpServletRequest.getSession(boolean)' in SAML and OIDC implementations to maintain route to the right Middleware node, which spawned the Open-Xchange session.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs
