2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Release 7.10.3.

66622 Confirmation mail of appointment ever in English and Coordinated Universal Time

For events where the (external) organizer is not attending, the timezone is not set explicitly and falls back to the system default.

This has been solved by preferring event timezone in notification mails for external organizer that does not attend the meeting.

67692 Problem displaying videos

The "important" CSS style value was dropped.

This has been solved by keeping the "important" CSS style value is dropped.

67718 Vacation notice in UI available even if mail backend does not support this

Action command was not checked for drop down in mail toolbar.

This has been solved by checking vacation action before rendering dropdown link.

68150 Shift+Enter does not work with Firefox

Scroll behavior in enter key listener changed selection.

This has been solved by checking shift key too and prevent execution in that case.

68222 "yum update" on RHEL6 shows the following error: "warning: %post(open-xchange-oauth-7.10.2-17_17.1.noarch) scriptlet failed, exit status 1"

The exit status of the last command in a scriptlet determines its exit status and at the same time a return value of 1 from `ox_scr_todo` signals that there's nothing left to do for a given SCR. For this bug `ox_scr_todo` was the last statement from the scriptlet and thus after the first update of `open-xchange-oauth` that contained SCR-316 there was nothing left to do at the end of the `postinstall/update` and `rpm` handled this like an error.

This has been solved by switching from expressions and conditionals to `if` lists to get proper return value.

68285 Filter rules can have > 2GB if using GB/MB/KB

Unit was not considered when checking size.

This has been solved by adjusting check accordingly.

68351 Google account after password change offers "Try again"

This has been adjusted and for error code OAUTH-0013 button "Try again" is replaced by "Edit accounts" that links to corresponding settings pane.

68421 HTML and CSS problem in combination with media-queries

Every rule in the stylesheet was treated as a css rule.

This has been solved by treating rules according to rule type.

68424 AM1 & AM2 Sent Mail Listing Missing Recipients

Overlapping addresses were not correctly handled.
This has been fixed by adjusting associated css.

68435 Error occurs when moving mail from external account to default

Mix-up of folder to account association when composing JSON response.
This has been fixed by accessing folder in proper account.

68501 Distribution list is not shown in mail compose address picker

Now a popup is displayed if maxlimit for the addresspicker is reached and "admin=false" parameter is respected if applying index range.

68510 MAC contacts app does not allow to add new contacts to OX on Catalina

The contacts application in the latest macOS release introduced a bug where the current user's privileges were derived from the virtual root, and not the actual contacts collection.
This has been fixed by indicating privileges from default folder also for root collection for macOS client.

68516 Caldav Sync Problem - 500 CalDAVAccountRefreshQueueableOperation

URIs in href-elements within a PROPFIND request from a client may get decoded two times under certain circumstances, which might lead to a runtime exception whenever the original URI contains the percent sign '%'.
Solution: Ensure to decode percent-encoded values only once.

68522 Mail settings not displayed when mailfilter package (API) not enabled

Missing capability check before sending requests to the API.
This has been solved by adding "global" capability check in internal API module.

3 Changes relevant for Operators

3.1 Changes of Configuration Files

Change #SCR-562 Added the ability to allow or denied hosts when a file is uploaded by user to an office document

Each time when a user adds a file from url to a office document the host will be checked against a white- and blacklist if the selected host can be used.

```
# Allows to control the host of an url when a user uploads a file to an office document.  
# Because of security risks some hosts are not allowed. # Default value: 127.0.0.1-127.255.255.255,localhost  
com.openexchange.office.upload.blacklist=127.0.0.1-127.255.255.255,localhost # Allows to  
control the host of an url when a user uploads a file to an office document. # Independent  
from the blacklist you can enter hosts which are always allowed. # Default value: com.openexchange.o  
Adding new file upload related properties to /opt/open-xchange/etc/documents.properties  
(office repository).
```

4 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

5 Fixed Bugs

66622, 67692, 67718, 68150, 68222, 68285, 68351, 68421, 68424, 68435, 68501, 68510, 68516, 68522,
