2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5720.

MWB-31 not possible to add multiple totp accounts on same server

No unique information for the TOTP account.
Added the user's login to the TOTP account.

MWB-273 Unexpected error [Error performing calendar migration in context xxx] caused by NullPointerException

A missing value within the legacy series pattern causes an unhandled exception when trying to convert it into a recurrence rule.
Fall back to "first" week when converting monthly_2/yearly_2 patterns if not specified.

MWB-291 Email compose dialog: Error message is not understandable

No appropriate error returned to client in case an invalid E-Mail address is passed.
Orderly advertise error code "MSG-1008" in case an invalid address was given.

OXUIB-183 Found no such composition space

There is a little time gap between the POST /compose/:id/attachment to state to have a progress of 100% and the fact, that the upload call resolves. This is the time, the server needs to finally store the attachment somewhere. If the mail is send in exactly this gap, a race condition between sending and attaching the image to the mail might occur.
Wait until the attachment-upload has been resolved before the mail send process can be started.

OXUIB-214 Auth fields for SMTP Server not greyed out when using "same as incoming mailserver"

A dialog automatically removes all "disabled" properties when it is made visible.
The attribute "data-manual" was added to prevent this.

OXUIB-215 Guided Tour does not start when invoking from the Settings Menu

Settings was moved out of the dropdown. It has it's own launcher icon now. Tour was not updated.
Tour uses the new icon instead of looking for the missing dropdown link.

OXUIB-223 POP3 account can not be added manually

The button "Ignore Warnings" was configured incorrectly.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

MWB-31, MWB-273, MWB-291, OXUIB-183, OXUIB-214, OXUIB-215, OXUIB-223,
