## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5856.

### **MWB-534** OIDC login fails for 'slow' providers when validating JWT token due to default socket readtimeout

It was impossible to specify HTTP read/connect timeouts for outbound HTTP communication of the OpenId round-trip.

This has been solved by adding options to specify HTTP read/connect timeouts for outbound HTTP communication of the OpenId round-trip.

`com.openexchange.oidc.http.outbound.connectTimeout` The connect timeout in milliseconds. If establishing a new HTTP connection to a certain host exceeds this value, a timeout exception is thrown. Default is 5000.

`com.openexchange.oidc.http.outbound.readTimeout` The socket read timeout in milliseconds. If waiting for the next expected TCP packet exceeds this value, a timeout exception is thrown. Default is 15000.

## 3 Changes relevant for Operators

### 3.1 Changes of Configuration Files

#### **Change #SCR-604** Changes in OX PNS configuration

Added property `topic` for clients configured in `pns-apns-options.yml`, specifying the topic to use for OX PNS push notifications. Topic is the iOS app's bundleid. No default value. Dropped lean property `com.openexchange.pns.transport.apn.ios.feedbackQueryInterval`. Property is not needed anymore with new push mechanism via HTTP/2

## 4 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

## 5 Fixed Bugs

MWB-534,
