

Release Notes for Patch Release #5904
2020-11-23

Security Patch Release

This Patch Release addresses critical vulnerabilities; please consider deploying it as soon as possible. Not deploying this Patch Release may result in remote service exploitation, security threats to users and exposure of sensitive data.

Detailed vulnerability descriptions will be publicly disclosed no earlier than fifteen (15) working days after public availability of this Patch Release. There is no indication that one or more of these vulnerabilities are already getting exploited or that information about them is publicly circulating.

2 Vulnerabilities fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5890. Solutions for vulnerabilities have been provided for the existing code-base via Patch Releases.

MWB-646 CVE-2020-28943
CVSS:3.1

OXUIB-509 CVE-2020-28945
CVSS:3.1

OXUIB-491 CVE-2020-28945
CVSS:3.1

OXUIB-481 CVE-2020-28945
CVSS:3.1

3 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #5890.

MWB-677 CalDav with OBS (OXaaS) not working on Thunderbird 78

Mozilla changed the user-agent string to no longer contain Lightning, probably because the previous calendar plugin is now integrated into the Thunderbird core.

We adjusted our documentation to handle this:

https://documentation.open-xchange.com/7.10.4/middleware/miscellaneous/caldav_carddav.html

MWB-674 Unable to get/copy a message from the primary account to an IMAP folder from an external account

Possible web proxy configuration not always considered when establishing a mail/transport connection.

Orderly consider possible web proxy configuration when establishing mail/transport connections to solve this.

DOCS-2854 GENERAL_NODE_IN_MAINTENANCE_MODE_ERROR after update to 7.10.4 until restart of the node

Starting a new node can very seldomly lead to a merge situation, where Hazelcast changes its own uuid. That's unexpected behavior and was not detected before.

The OX Documents monitor implementation now checks the lifecycle events from Hazelcast more carefully and detects that a merge has been done. This is handled and internal classes are re-initialized to work with the new Hazelcast uuid (especially the JMS queue names are derived from it).

MWB-694 AppSuite Webmail Safari Error

Null check for relay state was not sufficient.

This has been solved by properly checking for empty relay state.

OXUIB-535 Print view for imported entries does not adjust calendar dates by Time Zone

No conversion to default time zone when printing in month and week view.

This has been fixed by adding time zone conversion.

DOCS-2889 Blank page when starting a presentation after "new from template"

Due to the backport of the Advisory Lock feature a small part was missed.

This has been fixed by adding the necessary part to the PresenterDocProcessor to handle the REQUEST_JOIN correctly.

MWB-573 Sbin/deleteuser failed mit 'user could not be deleted'

Carriage return in encoded value of organizer property prevents the reference to the deleted user being discovered correctly.

This has been solved by Disabling line folding when encoding organizer value, fix already stored values via update task.

MWB-614 Listquota: Could not find or load main class

Was caused by wrong package name.

This has been solved by using correct package name.

MWB-672 No log for notification delivery to Apple in appsuite for ox-app

Added INFO logging to APN/APNS HTTP/2 transport.

4 Changes relevant for Developers

4.1 Changes of internal APIs

Change #SCR-769 New parameter "folder" for "get" action in module "quota"

Introducing a new string parameter "folder" to the get action of the "quota" module. This new, and optional, parameter can be used to query the quota for a specific folder.

5 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

6 Fixed Bugs

MWB-677, MWB-674, DOCS-2854, MWB-694, OXUIB-535, DOCS-2889, MWB-573, MWB-614, MWB-672, MWB-646, OXUIB-509, OXUIB-491, OXUIB-481,
