2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6016.

OXUIB-905 mail compose: double scrollbars when in text mode + attachments

This bug is caused by the incorrect calculation of the height of the text field. The calculation has been corrected and irrelevant scrollbars are hidden.

OXUIB-916 bg-bg and et-ee mappings

Added missing mappings and files.

OXUIB-927 Can't copy content from Connect Your Device Wizard

Text was unselectable and focus trap prevented from proper selection. Enable text selection and disable focus trap.

USM-26 Mail folders are not visible created by EAS client

The parameter "subscribed" has changed its default from true to false. USM does not send it, because it was not necessary so far. USM adds the parameter "subscribed" always set to true.

USM-27 several hundred of "Couldn't determine mail object for ItemOperations Fetch, objectId is null" per minute after update

Starting with 7.10.5 we improved the support for the Mobile-Outlook-App. Now it may be used to sync via EAS. But so far only basic features have been tested. The Mobile-Outlook-App is the first client which uses <ItemOperations_Fetch> to sync a contact. So far only mail objects have been fetched. Fetching a contact is not implemented yet.

Implement fetch of contact objects. The protocol allows more collection types : calendar, tasks. So far these cases did not occur in our tests. It could be that the fix does not avoid all messages. In that case we will need debug logs (including EAS log).

3 Tests

Open-Xchange has successfully verified all bug fixes that could be reproduced within a lab environment.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

OXUIB-905, OXUIB-916, OXUIB-927, USM-26, USM-27,
