2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6046.

OXUIB-1066 Creating mail results in error messages

When loading the Mail Compose dialog in the mobile view it is possible that the mail quota has not been updated yet and therefore the default value is stored. This leads to the assumption that the mail quota has been reached.

The method with which the mail quota is evaluated has been adjusted to solve this issue.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

OXUIB-1066,
