## 2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6069.

### **OXUIB-1108 Date header in mail view removes leading zero despite setting suggesting two character date entries**

This is a bit of a design problem. The settings dialog suggests only one date format, but UI is using 2 formats. A long (with leading zeros) and a short format (without leading zeros). Since there is only one format to choose from we are always wrong one way or the other.

Solution: If a user explicitly sets a specific format (customized locale data) we overwrite both, the long and short format with the chosen format. If the user uses the language specific default we use long and short format as before.

### **OXUIB-1094 Inconsistent mail draft handling mobile UI <-> Web UI**

Wrong action type leads to creating a copy instead of editing the draft.

This has been solved by changing the type from 'copy' to 'edit'.

### **OXUIB-1075 Quick start menu bar configuration for external users incorrect**

No sufficient checks for quicklauncher app availability.

This has been solved by hiding unavailable apps in quicklauncher and config dialog. Apps that have upsell enabled are considered available. Guests do not have upsell so they will not see upsell enabled apps they lack the capabilities for.

### **OXUIB-1042 Calendar entry can not be modified (empty popup, UI hangs)**

Missing organizer caused js error in UI.

Solution: Make UI more robust so it doesn't break if an appointment has no organizer.

### **OXUIB-1024 Skewed Images After attaching them during mail compose**

Editing an image with the createImageBitmap function within a worker in Chrome Browser version > = 77 leads to incorrect results.

Solution: For Chrome Browser version > = 77, the editing process with createImageBitmap is no longer performed in the worker.

### **MWB-1394 Drivemail: share expiration is wrong if user timezone is not GMT+0**

Client-wise specified expiration date got adjusted by user's time zone.

Now passing client-wise specified expiration date as-is (assume GMT+0) and do not adjust by user's time zone to solve this issue.

### **MWB-1392 Calendar share notification is sent off from the main account mail address instead from the default sender address**

Different mail address in FROM header and mail text.

This has been solved by respecting the property com.openexchange.notification.fromSource and use the default sender address in mail text, too.

### **MWB-1384 Birthday / Public calendar shows no entries when using czech language settings**

This has been solved by fixing a typo in Czech .po file.

### **3 Tests**

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

### **4 Fixed Bugs**

OXUIB-1108, OXUIB-1094, OXUIB-1075, OXUIB-1042, OXUIB-1024, MWB-1394, MWB-1392, MWB-1384,
