2 Bugs fixed since previous Public Release

This section provides a summary of bug fixes and changes that have been applied subsequently to shipping Patch Release #6126.

OXUIB-1406 Pdf write error message not translated

Was caused by a missing gt call.
This has been fixed by adding the missing gt call.

OXUIB-919 Huge amount of "Found no such resource in attachment storage for identifier: undefined" errors after update

Improvement: Do not complain when client tries to delete a non-existing attachment.

MWB-1560 Huge traffic increase on userdb after updating to 7.10.5 (incl. custom package)

In case client-passed token does not match the one currently associated with requested composition space while trying to perform an update ends in an infinite retry loop.
This has been solved by using dedicated error code in case client-passed token does not match the one currently associated with requested composition space.

3 Tests

Not all defects that got resolved could be reproduced within the lab. Therefore, we advise guided and close monitoring of the reported defect when deploying to a staging or production environment. Defects which have not been fully verified, are marked as such.

To avoid side effects, the shipped packages have gone through automated regression test on both, a Continuous Integration System and a dedicated server set-up for system and integration testing. All changes have been checked for potential side-effects and effect on behavior. Unless explicitly stated within this document, we do not expect any side-effects.

4 Fixed Bugs

OXUIB-1406, OXUIB-919, MWB-1560,
